

Low-Code Citizen Developer Training

TRAIN THE BUSINESS. IMPLEMENT LOW-CODE. RELIEF IT DEPARTMENTS. ACCELERATE.

Your employees from specialist departments will be enabled to create their own apps and workflows in the Microsoft Power Platform – managed, secured and efficient with the low-code approach. Our established training concept is used for this purpose. 🚀

Our training is based on the Microsoft Enterprise Skill Initiative as well as our valuable accumulated best practices from real-world.

Consulting, training and development with ❤️ made in Germany within the  Reply Group.

Low-Code Citizen Developer Training

LOCATION

virtual ✕ at your place ✕ in a Reply office

DURATION

10-20 days (regular)

COSTS

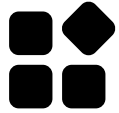

upon request*

- 💡 Learn how to create **interactive apps** and **intelligent automations**
- 🔍 Facilitate **modern AI features**, such as Chat GPT, OpenAI, AI Builder, Copilot, Express Design
- ✍️ Get inspired by **typical use cases** and **best practices**
- 🔗 **Extend Microsoft 365** (including SharePoint, Microsoft Teams) with custom business logic
- 🎯 Learn how **Power Apps** and **Power Automate** and other components play together
- ⚙️ Identify the **best technology fit** and its application for your digital transformation
- 🔒 Learn more about concepts of collaboration with central IT through **Fusion Teams**
- 📄 Innovative **multiplier training** for typical low-code tasks based on our proven **training matrix**
- 📄 **Licensing** and costs
- 🏆 Provision of **training documents** and results

* Microsoft sponsoring possible

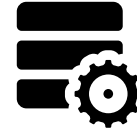

Outcome for Training Participants

Create interactive apps and integrate them into Microsoft Teams

Intelligently automate business processes and daily tasks

Explore data management and storage in Dataverse

Help your colleagues with typical low-code tasks (multiplier training)

Easily connect to 900+ different systems

Govern ownership and share apps and automations

Increase individual employee productivity

Creatively identify and implement new use cases

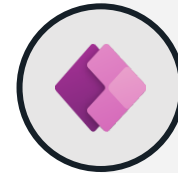

Exemplary Training Contents & Examples

- We train your employees so that your company becomes a **self-digitizing company!**
- Our proven training concept includes training content for **all components of the Microsoft Power Platform** and related systems beyond, i.e. scaling in Microsoft Azure.
- We **enable** – after individually agreed training units – your technology-open employees from specialist departments to **create apps, flows, reports and chatbots**.
- Whether as a new career path or as an award – new Citizen Developers can be deployed in professionally set-up projects to **strengthen the agile project philosophy**.
- In addition, Citizen Developers can digitize and automate their own workflows (**personal productivity**).
- Our certified trainers convey real **best practices** in direct experience exchange to guarantee success.
- We recommend the introduction of a **community concept** to anchor the low-code philosophy.

- Create personal reports
- Quickly merge multiple data sources

- Create graphically simple apps with templates via design repositories
- Replacing Excel lists with structured data

- Automate individual workflows
- Use 900+ connectors (restrictable) for broad use cases

- Creating intelligent chatbots, integrated with various systems
- Connecting to Microsoft Teams

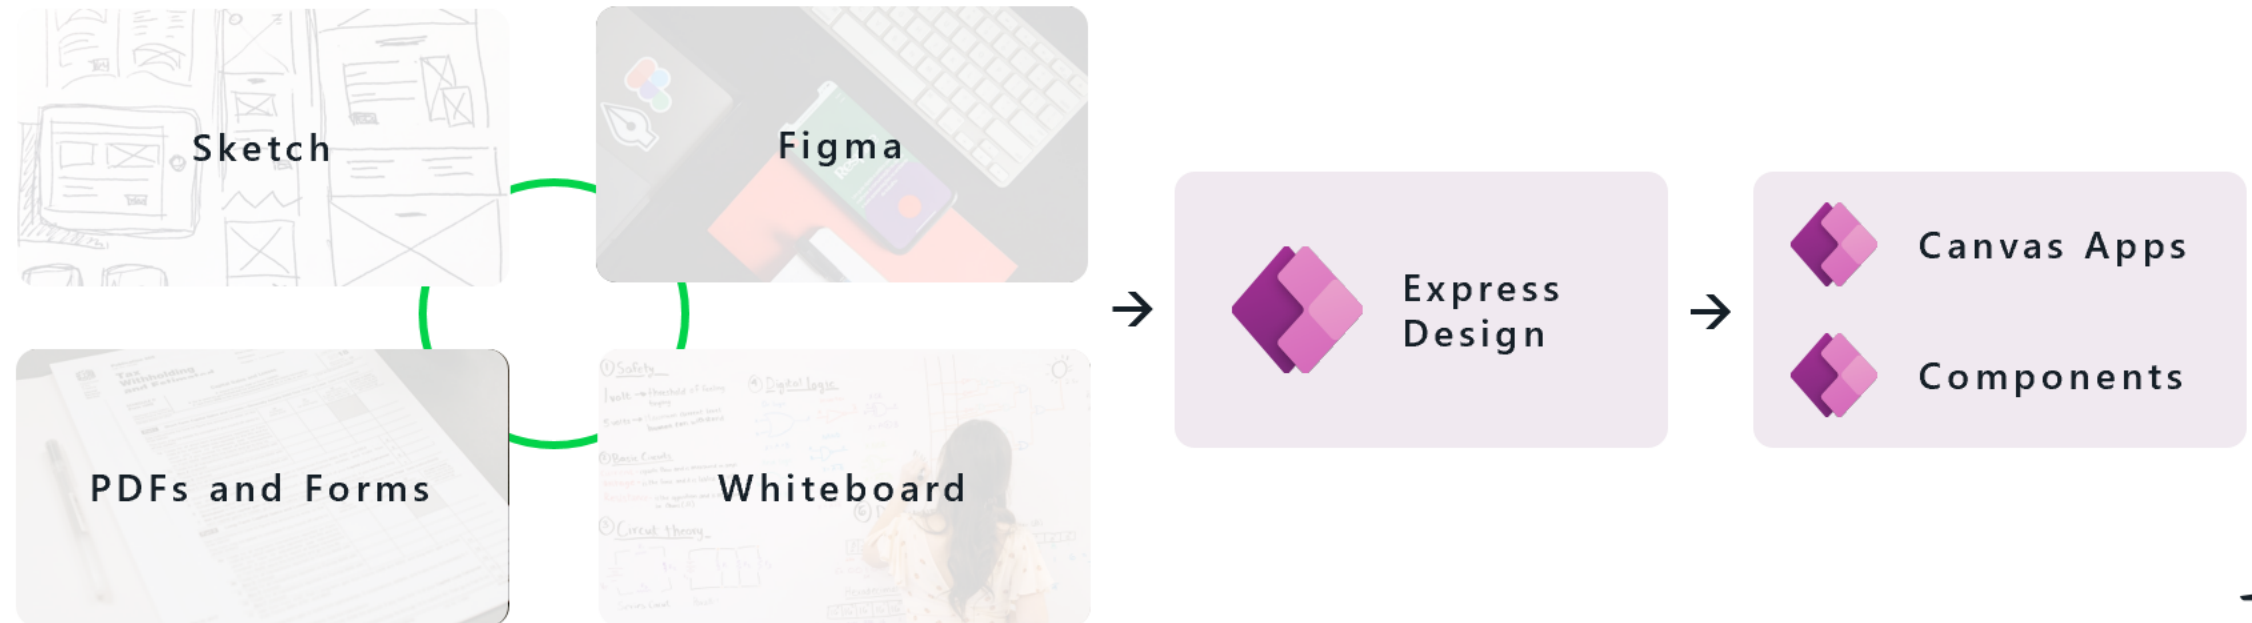

Hook Up With Professional UI/UX Tools

- The new  Figma integration provides Microsoft Power Apps with a **professional, globally established collaborative interface design tool**.
- Quickly create a central **design repository, mockups or click dummies** – maybe even already based on existing design patterns of your Corporate Identity (CI) or by a transfer and creation by our design experts in the Reply network.
- A design and workflow in Figma is often also a great starting point for a use case to be implemented **as part of a hackathon** (feel free to ask us).
- Transfer Figma design elements into the Microsoft Power Platform – either directly into Power Apps (direct use) or into components (like templates) that can be deployed centrally in the Microsoft world.
- Integration lets all your apps shine and **solves key and typical challenges** that come with adopting a low-code platform.

Start With Your Sketch On Paper

- Express Design takes **AI-powered low-code app development** to a new level.
- Jumpstart your app development: **Transform existing design artifacts and visuals** (paper sketches, whiteboard, Miro, Figma, more) **directly into a working app** – including a professionally set up data model in Dataverse!
- We love hackathons - and you? Express Design often makes a great entry point for Citizen Developers to implement use cases, for example in a one-to-two-week **hackathon** (ask us).
- Apps can be easily customized through Power Fx (low-code functional language). We are happy to support you with our customized trainings from our extensive training catalog, e.g. **Citizen Developer Training** (ask us).

Training Methodology

Perfect Content

- Our established and proven training concept includes content – structured in a matrix according to technologies and stakeholders.
- Hey Pro Developers, Citizen Developers, Administrators or employees from specialist departments – we got all of you covered! We get everyone involved.
- Our content follows the **Microsoft Enterprise Skill Initiative (ESI)**.

Perfect Skills

- Whether apps, workflows, chatbots or dashboards and reports - we have the right experts for your challenge!
- We cover the entire range of Microsoft Power Platform and related technologies - both technologically and methodologically.
- Through our network (Reply, Microsoft) we complement our trainings with additional specialists as needed.

Perfectly Certified

- Our trainers hold the latest Microsoft certificates in the field of business applications.
- We continuously educate ourselves both internally and together with Microsoft.
- Motivation, customer satisfaction and professionalism are our top priorities.
- With our strong expertise, you will have the opportunity to gain valuable first-hand best practices.

We tailor the training according to your individual needs. What are you waiting for? Go ahead and contact us!

Training Portfolio

Citizen Developer

- Citizen Developers work in the area of low-code and are an **essential part of agile low-code projects**.
- Used in projects, numerous tasks can be performed by employees from specialist departments in order to forge an even stronger team with the other stakeholders. **Joint views of development and the finished application** make this possible.
- In addition, apps, workflows, dashboards and chatbots can be built independently to make individual work even more efficient.

Pro-Code & Architect

- Even in a low-code-driven cloud world, Pro-Code cannot be missing. Architects and programmers build central structures and provide support for issues that **go beyond low-code**.
- These include **scaling in Azure**, continuous integration (CI) with pipelines, and the development of custom components.
- Connecting systems through custom connectors and interfaces.

Governance

- Customize the Microsoft Power Platform to your company's specific needs and secure it with technical measures, such as the **Center of Excellence**.
- Create a secure, managed environment for developers and departmental staff to create a self-digitizing organization.
- Establish the Microsoft Power Platform through a mature community concept.

What are you waiting for?

- Do you want to **evaluate** a project?
- How do I **digitize and automate my processes** with the Microsoft Power Platform?
- Do you need **best practices** and hands-on support from our motivated experts?
- Do you have questions about **opportunities** with Microsoft Power Platform?
- How do I organize **governance and compliance**?
- What makes the **Power Platform particularly fast** to work with?
- How does **democratization** play into your hands and how can I start with **envisioning** and business value assessments?
