# SYVIR Service Diagnostics

SD

MSP Multiple client remote diagnostics.

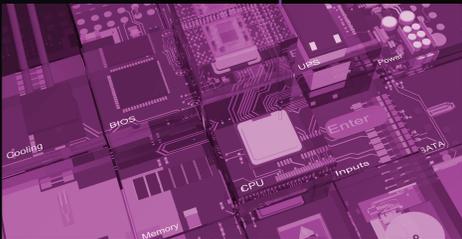

Specially designed for managed service providers to manage multiple clients endpoints diagnostics.

A RMM cloud tool, Syvir SD enables MSPs to do remote diagnostic checks on clients endpoints.

Check your clients Windows PCs, Servers, VMware and Hyper-V hardware, for problems and failures.

Cloud based, view diagnostic information through a web browser.

Produces .csv file reports for your clients on their endpoints health.

SYVIR®

# Manage client endpoints from anywhere in the world.

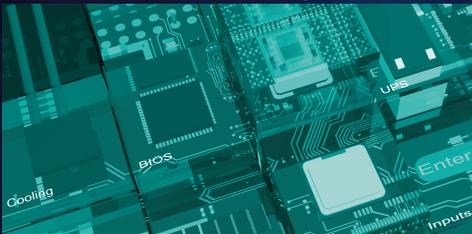

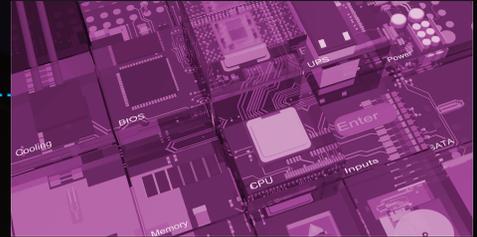

SD

Syvir Service Diagnostics is the easy way to find out if any of your clients endpoints have hardware issues. SYVIR SD works through a small program on the target PC, Server or virtual machine.

The console probe on the machine is accessed using remote desktop. Data is transferred through HTTPS

Data is transferred from the console probe to the SYVIR SD cloud.

You can then view diagnostic data through a web browser.
