

# Syncier Marketplace Private Area

It is possible to have a **Private Area** on the **Syncier Marketplace**, which gives you a tool to visualize your developed and subscribed APIs on an internal Marketplace. This area is connected to the public Marketplace so internal APIs can be fluently published from **Private to Public** or to **selected Partners**.

If your Organization already has an API Management Provider (Apigee, Mulesoft, Axway) it is not a problem connecting to them. The Business Model is a Software as a Service on the private Area and the Set Up Fee depends on the level of Integration 1,2,3

## Why Syncier Private Area?

This Organization feature (private Area) can be your **central platform for API-based services**. These services can be exposed and consumed inside of one corporation at a dedicated Private Area or for the whole industry. It helps you to boost your business success by leveraging the expertise and existing services (re-use instead of re-invent).
