

Why choose Brennan as your technology partner?

For over 25 years, Brennan has been committed to making our clients' lives easier. We do it by offering our customers exactly what they need: professionalism, know-how, simplicity, and the same passion for your business as you have. Everything about how we work at Brennan is optimised to ensure we keep customers happy, no matter what.

We deliver world-class technology and strategic advisory services. We help our customers transform with digital solutions that make a difference to the way they do business, with a core focus on cloud applications, data and analytics, and automations.

Drive results with our modern data solutions

Data, as the foundation for all advanced analytics and machine learning, is one of the most strategic assets a company can have.

At Brennan, we specialise in leveraging the Microsoft Intelligent Data Platform to help organisations to maximise the value of their data in whatever form it exists. Our teams optimise the way data is managed to support all uses of data, enabling real time analytics that drive improved decisions, business processes and outcomes.

We provide end-to-end lifecycle data services: from advisory and enablement, to design and implementation, to 24/7 support with our Virtual DBA Service.

“We want to make people’s lives easier so they can focus on what matters to them the most.”

Dave Stevens, Founder & Managing Director, Brennan

Our Data & AI capabilities

Brennan's Data & AI services and solutions are designed to help organisations grow and differentiate themselves against competition.

- **Advisory Services.** We work closely with you to establish a vision for data within your organisation, developing a strategic plan that will help you to successfully leverage data to create a competitive advantage and offer new services, enter new markets, or radically optimise existing offerings.
- **Data Platform Modernisation.** We help you realise your data's full potential with a scalable and flexible modern data platform. Leveraging the leading data solutions from Microsoft, we modernise or upgrade your existing data platform, to increase performance and cut operational costs.
- **Modern Data Warehouse.** Traditional data warehouses alone are no longer enough for modern data management. Using Microsoft Azure cloud technology, we help you generate deeper insights. Our services include the consolidation, storage, and integration of all your business data into a single repository, while enabling big data and advanced data analytics capabilities.
- **Virtual DBA.** Our award-winning, 24/7 Virtual DBA Service provides you with the flexibility you need – from enhancing your existing team to providing total ownership of your SQL Server estate. We enable you to supplement your Microsoft Data Platform and Data Analytics capabilities, without increasing headcount.
- **Microsoft Power BI.** Power BI is a suite of cloud-based business analytics tools that bring in data from most major sources, to transform your company's data into rich visuals and analytics. We help you to leverage Power BI to connect disparate data sources from across your organisation into one, central location.
- **Internet of Things.** IoT technology enables companies to enrich experiences and optimise business practices. Our IoT capabilities enable you to distribute the intelligence of your applications across the cloud and the Edge.
- **Artificial Intelligence and Machine Learning.** We help companies modernise with Azure AI Services, improving insight through advanced analysis, logic-based techniques, and machine learning. We seamlessly extend your existing data & analytics investments – quickly adding value with advanced analytics.

Some of our Non-Profit Clients

Brennan has over 1400 clients across varying industry sectors. Below is a snapshot of some of those clients in the non-profit and charities sector:
