

Peg@sus 305 Certified E-Mail is a collaborative electronic solution that allows the replacement of printed media that require an autograph signature, covers the requirements that are essential in case of legal controversy.

The solution is certified in the Mexican standard: NMX-I-305-NYCE-2016, which establishes the formats and rules for the preparation, verification and transmission of Electronic Official Documents, which allow the replacement of printed paper documents. Increase the certainty of authorship and integrity and chronology, using Advanced Electronic Signature (Certificate x.509), time stamping and providing the necessary verifiable evidence that can be used in legal actions. The standard integrates a robust method of identity of organizations and participants, electronic time stamp, electronic acknowledgment, as well as adequate mechanisms for the exchange of documents and information.

Peg@sus 305 Certified Email, has more than 20 years of experience in the market, with more than 30,000 users in multiple Ministries and Government Organizations operates through five basic concepts:

- | | | | | |
|--|--|---|--|---|
| <p>1.
OFFICIAL ELECTRONIC DOCUMENT</p> <p>Facilitates the adoption of a real model of Electronic paperless government. It's a collaborative solution of dynamic flows, through case management and integrating Electronic Signature in order to ensure legal evidence.</p> | <p>2.
ELECTRONIC SIGNATURE</p> <p>The data set and characters that allows identification of the signatory, which has been created by electronic means under its exclusive control, so that is related solely to the person and the data to which it refers, allowing the identification of any amendment thereof, with the same legal effect that the handwritten signature.</p> | <p>3.
INTEROPERABILITY</p> <p>Allow different control systems sending and receiving e-mails or Official Electronic Documents and has control over this exchange of information, implemented with the scheme of the Electronic Post Office and interoperability through communities.</p> | <p>4.
DYNAMIC PROCESS MANAGEMENT</p> <p>The solution allows different roles within the organization, changing processes at any time and with very low latency. "It is a set of disciplines and technologies that allow a person or system to make appropriate changes in time to meet the implicit and explicit needs of the processes"... (Gartner. IT Glossary).</p> | <p>5.
NMX-I-305-NYCE-2016 STANDARD</p> <p>This Mexican Standard lays down the rules for the elaboration and verification of the Official Electronic Documents, which allow the replacement of documents and trades printed on paper. It allows the generation, use, exchange and safeguarding of the Official Electronic Documents to be automated without dependence on proprietary suppliers or technologies. In addition, it sets out the technical specifications that organizations in the national territory must observe to ensure interoperability between their document management systems.</p> |
|--|--|---|--|---|

Peg@sus have already generated solid, quantitative benefits through several e-government deployments at the executive and judicial level in Mexico, where the product originated and where it has been deployed to more than 25,000 federal government employees since its creation.

WHAT WE DELIVER

FEATURE

- The solution generates, receives, checks and validates Official Electronic Documents.
- It incorporate the use of Electronic Signature that ensures legal certainty and the most up-to-date data security methods for data storage and for data transmission via the Internet. It supports the Standard for Interoperability and Open Data, spearheaded by Pegaso Tecnología and promoted by the Mexican government to other interested nations.
- Use of advanced and widely deployed desktop, database, Internet, and web technologies.
- Empowers the end user to always know the exact status of any matter that must be addressed, (transferred, pending, has expired, is a person involved or multiple responsables), whether a request was received on a printed document, via email, interoperability, portal or within the same solution.
- Supports extensibility contained or required by the recipient through addendums structured information. The addenda is a customizable extension of the Official Electronic Document that supports structured information.
- It's a dynamic approach to processes, in contrast to many existing ERP, CRM and BPM solutions that require structured and inflexible workflows.
- Web-based user interface and direct accessibility from Microsoft Office® and Outlook®.
- Support for and integration with e-mail and scanners.
- The essential tool for all "paperless government" initiatives.
- Comprehensive business intelligence functionality.
- The solution offers complete Management through the use of indicators, dynamic reports and multidimensional cube analysis.
- Allows the user structured and contextual search. The user will be able to locate any document and its path in the process.
- The solution organizes user configuration through various guidelines, such as: priority, application type, expiration date, signatures and authorization for third parties.
- It manages interoperability broker capabilities to connect governmental and private entities in a seamless network.

BENEFIT

- Provides document management control, collaboration for civil servants and executives, advisors, operators, and assistants in and out of government.
- Increase the transparency in government operations by automatically documenting the interactions between officials and government agencies.

- Reduces response times, ensures consistency and uniform handling for services and procedures. Reduces operating costs by lowering expenses for office materials and enables remote work. Enhances accountability and transparency, for internal efficiency and citizen confidence.
- Ensures a framework for electronic document management with the same level of legal validity as traditional, paper-based document management.
- Minimizes implementation and adoption time and simplifies enhancement and expansion. Increases value of investment in existing technologies.
- Increases operational effectiveness.
- Provides flexible, efficient, and cost-effective deployment, operations, maintenance, and support.
- Obviates the need for drawn-out, highly specialized modeling and simulation processes. Helps organizations to save money and time and enables them to leverage existing skills to support continuous improvement.
- Minimizes training costs, shortens transition periods, provides rapid path to benefits, increasing employee morale and reducing turnover.
- Allows gradual adoption within the organization and facilitates collaboration with organizations that rely more on paper or do not yet have Peg@sus.
- Cuts operating costs, saving time, discouraging bias, and narrowing the digital divide. Enhances citizen confidence in process integrity.
- Links entities that use Peg@sus in a secure and trusted environment. Facilitates initiatives for paperless government.

SUCCESSFUL STORIES

Currently more than 25,000 federal government employees are users of Peg@sus in the following Government Institutions, among others:

- Finance Ministry
- Interior Ministry
- Energy Ministry
- Tax Administration Institution
- Communications Ministry
