CLOUD CONNECT

Introducing the new way to securely share applications & services with guest users while maintaining control over your own data to accelerate cross-organization collaboration & extend productivity with ease.
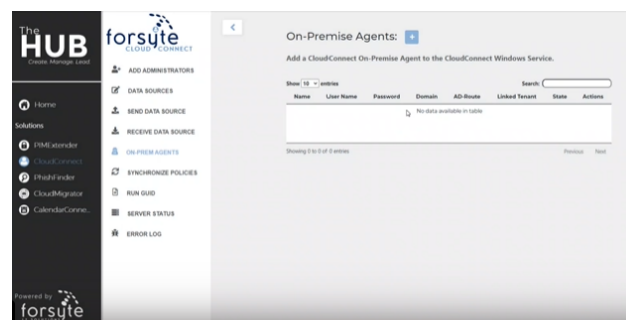

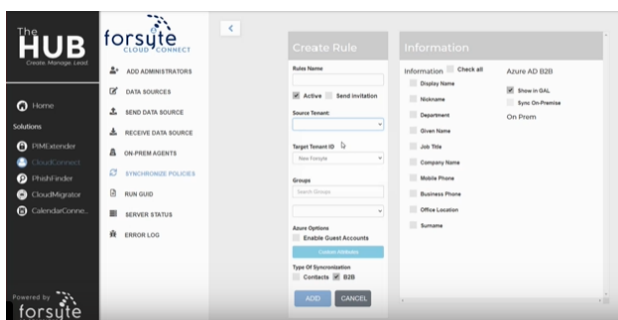

CloudConnect

Provides external identities in Azure AD.

Allow people outside your organization to access your apps and resources, while letting them sign in using whatever identity they prefer. Your partners, distributors, suppliers, vendors, and other guest users can now "bring their own identities." Whether they're part of Azure AD or another IT-managed system, or have an unmanaged social identity like Google or Facebook, they will use their own credentials to sign in. The identity provider manages the external user's identity, and you manage access to your apps with Azure AD to keep your resources protected at all times.

Azure AD External Identities focuses less on a user's relationship to your organization and more on the way an individual wants to sign into your apps and resources. Within this framework, Azure AD supports a variety of scenarios from business-to-business (B2B) collaboration to app development for customers and consumers (business-to-consumer, or B2C).

The need for cross-organization collaboration is increasing.

Invite external users into your own tenant as "guest" users that you can assign permissions to (for authorization) while allowing them to use their existing credentials (for authentication). Users sign into the shared resources using a simple invitation and redemption process with their work account, school account, or any email account. And now with the availability of Self-service sign-up user flows (Preview), you can also provide a sign-in experience for your external users through the application you want to share. You can configure user flow settings to control how the user signs up for the application and that allows them to use their work account, school account, or any social identity (like Google or Facebook) they want to use.

Your Solution for Secure & Successful Cross-Org Collaboration:

CloudConnect is a solution designed by Forsyte I.T. Solutions to accelerate cross-organization collaboration by providing cross platform address book synchronization & Azure guest account management. Organizations of all sizes can effectively manage address list synchronizations & guest accounts in a simple & easy to use interface.
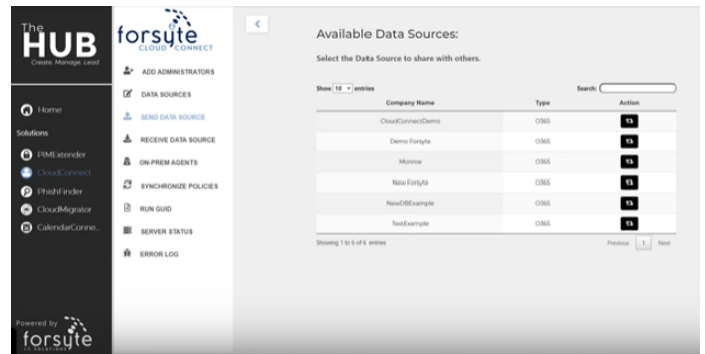

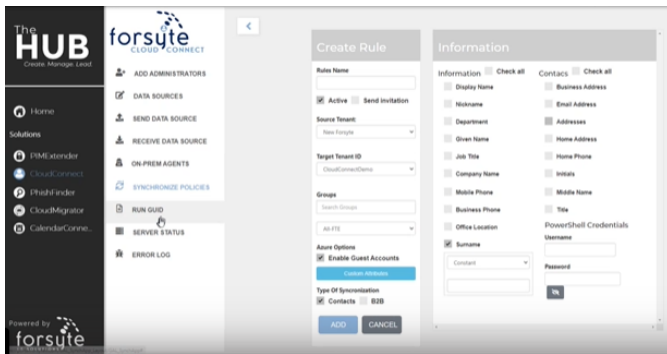

Experience the Benefits of CloudConnect:

- ✓ Provides a unified address list across organizations & platforms (Office 365, G Suite, Exchange)
- ✓ Create Azure B2B accounts en-masse sourced from an Office 365 or G Suite tenants
- ✓ Extend Azure B2B account access to on-prem AD
- ✓ Enables synchronization in minutes, not weeks

CloudConnect provides a richer collaboration experience across tools such as Microsoft Teams & makes it easy to quickly access the data you need. The product supports multiple platforms & provides an automated method to access internal resources for external organizations & global address list synchronization.

Empower your team:

- Cross-Org Collaboration
- Richer App Experience
- Minimal Setup

- Guest Account Mgmt
- Identity Mobility
- Azure AD Advanced Security

CloudConnect provides a richer collaboration experience across tools such as Microsoft Teams & makes it easy to quickly access the data you need.
