RI

## Remote Inventory.

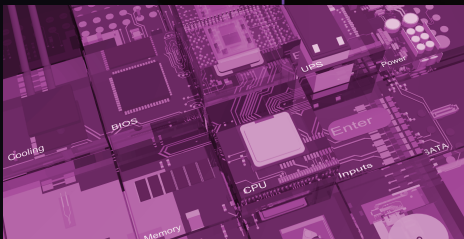

SYVIR RI enables system administrators to perform remote inventory checks on endpoints.

Check your remote Windows PCs, Servers, VMware, Hyper-V for inventory changes.

Cloud based, view inventory information through a web browser. Produces alerts if changes have been made since last scan.

# Manage endpoints from anywhere in the world.

Syvir Remote Inventory is the easy way to find out if any of your endpoints have inventory changes. SYVIR RI works through a small program on the target PC, Server or virtual machine.

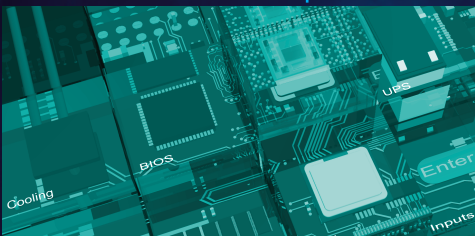

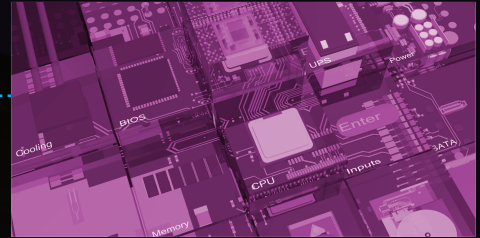

Run the client software on the machine through Remote Desktop.

Data is transferred from the console probe to the SYVIR RI cloud.

You can then view inventory data through a web browser.
