ERP>Fashion

Connecting the dots for all
your business operations

THE UK'S
LEADING
FASHION
ERP RETAIL
SOLUTION

ERP>Fashion

ERP>Fashion offers a comprehensive suite of functionality which allows you to easily manage your fashion business from end-to-end.

Receive and Manage Orders and Returns Easily and efficiently

The fashion industry often must deal with complex and specific product order requirements. With ERP>Fashion you can handle numerous orders altogether or input order details into the system separately. Here you can tailor the order to meet the customer's exact instructions, such as measurements, styles, fit and colour requirements. The order and payment status are all held in this easy-to-use single system and can be accessed by all staff from customer service, the warehouse, and the shop floor, significantly lowering the risk of errors and any miscommunications with the customer.

Orders and returns can be managed and tracked easily with up-to-date statuses automatically emailed to customers.

Keep Track of your inventory in any warehouse

Keeping track of your inventory is accurate, quick, and easy with ERP>Fashion. In a couple of clicks you can view, navigate & investigate the physical movements that make up your actual inventory. You can also manage multiple warehouses for distribution and transfer stock – even if it is still in transit!

With full courier integration, ERP>Fashion streamlines your shipping logistics. Shipping/ delivery addresses are stored and carried through from initial sales order, allowing you to pick, pack your order and print your shipping labels ready for dispatch. Handle partial shipments with ease and keep track of what has been dispatched and outstanding customer demand.

When your goods arrive our 3rd Party Logistics automation ensures that receipts are accurately posted within Microsoft Business Central, representing over & under receipt, tracking supplier returns and making sure that stock adjustments are correctly identified with reason codes.

ERP>Fashion

In the fashion industry, it's all about margins and a short time to market: the collection has to be available to customers as quickly and cost-efficiently as possible

The fashion retail industry has changed immensely over the past few of years with the choice of how, when and where we shop has grown from the traditional bricks and mortar shops to the ever-growing 24/7 online retail presence.

The way fashion brands and retailers must perform and stay ahead of the competition is almost unrecognisable from the last decade. Social Media and influencers have contributed to increasing consumers' expectations of the shopping experience. This is where an ERP system can help fashion retailers stay ahead of the competition and keep up to date with the ever-changing face of the fashion industry.

As specialist in the fashion industry Sci-Net has developed ERP>Fashion specifically for this sector with this propose built solution. By choosing us as a partner, you will be safe in the knowledge you will be dealing with a team of industry experts and a Microsoft Gold partner.

Other Key Benefits

Accurate Forecasting and improved purchasing power

The fashion industry also has products with short-term trends and items only available at certain times of year. With ERP>Fashion you can accurately predict stock levels and only order from your suppliers what you need.

You can also generate reports which detail how your suppliers/ vendors are performing in terms of delivery times and quality whilst helping you manage their costings too.

Keep control of costs, improve profit and customer service.

Our Landed Cost module allows users to define complex sets of rules to accurately predict indirect costs.

ERP>Fashion reduces time wastage and replaces the need for spreadsheets and manual processes, reduces the risk of human error and ensures a more streamlined workforce leading to improved customer service levels.

Container Management

The Container management gives your logistics team the ability to create and manage containers, grouping together purchase order lines whilst managing key ex-factory & arrival dates at a macro level.

Integrated Payment Gateway Systems

Create seamless and PCI compliant card transactions with your shop floor or website. All payments will be automatically posted to your account's ledger.

Deal with multi-channel promotions, discounts and create personal campaigns with exclusive sales. as well as sell and redeem vouchers across all channels, including POS, mail order and your e-commerce website.

Channel integrations make it easy for you to sell your product

Our range of channel integrations makes it easy for you to sell your product via traditional bricks & mortar, e-commerce as well as consolidation platforms such as Amazon or eBay.
