Cloud check navigator.

ANS   Think Bigger.

What are ANS navigators?

Navigators are engagements that provide you with the resources and information to be able to realise your long-term strategic vision and steer your digital transformation journey.

What is the Cloud Check Navigator?

The Cloud Check Navigator is designed to help you optimise your cloud environment. Migrating to public cloud brings a whole host of benefits but if you've got security concerns or your cloud expenditure is spiralling out of control – it's time to adopt best practice and reduce platform spend. This Navigator will provide you with a detailed architecture efficiency report with key recommendations to help you reduce cloud consumption costs, validate governance controls, increase operational efficiency and ensure your platform aligns to current best practice standards.

Who is this suitable for?

This Navigator is suitable for organisations that have recently completed a data centre migration to cloud. It's also ideal for organisations that are experiencing significant or noticeable month on month consumption increase, have poor operational capabilities or have poor insight into your cloud's governance and/or security posture.

What outcomes can I expect?

We will provide you with a detailed analysis of your current cloud environment, covering four key areas:

01 Cloud consumption cost report

We will ensure that your automation, scaling and resource provisioning is configured to maximise cost efficiency from a consumption perspective. It will also provide tactical recommendations on where immediate cost savings can be made.

02 Governance and security report

This report will provide validation on your governance and configuration policies to ensure that the platform aligns to your security and compliance standards.
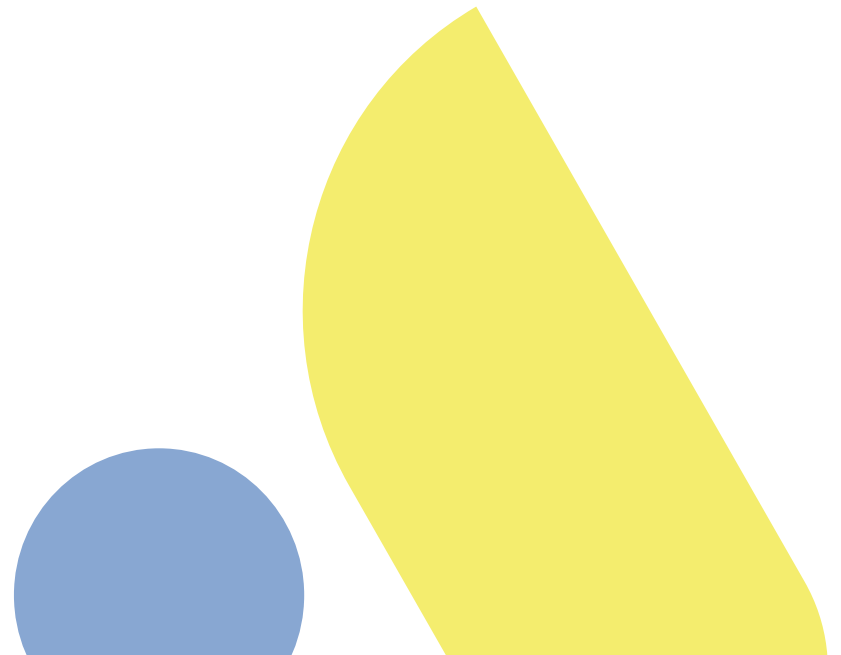

03 Operational efficiency report

We'll highlight any opportunities for re-platforming, automation and orchestration to maximise your operational efficiency, and reduce your operational burden.

04 Architecture best practice report

The output will compare your platform against vendor best practices from an architecture, configuration and integration perspective.

The output will compare your platform against vendor best practices from an architecture, configuration and integration perspective.

What are the benefits of using an ANS navigator?

Rapid time to value

It typically takes 4-6 weeks to complete this Navigator, and usually doesn't require more than 10 hours of your time spread over those weeks.

Board ready outputs

We will provide you with board ready outputs, a strategy document, business base and presentation.

Insights and recommendations

We will provide insights and recommendations on the health of your current IT environment.

Defined operating model

Moving your data to the cloud is just the beginning. We'll work with you to establish your needs moving forwards, be that training, support or building out capability.

Organisations who use our Cloud Check navigator typically see:

- Up to 40% reduction in cloud consumption costs
- Over 20 governance issues highlighted with recommendations
- 10+ operational efficiency opportunities
