

Our mission is to redefine the way people approach problem solving and bridge the gap between pure creativity and applied science

We aim to achieve that by providing an integrated ecosystem of devices and software solutions that brings a new meaning to learning and mastering the XXI-century skill set

XXI-century economy demands flexible skill set covering abstract thinking and applied science

There's large and growing demand for STEAM* skills ...

...yet schools fail to catch up with it...

... creating many opportunities in commercial edtech services

Barack Obama: "Investing in America's future means preparing students with STEAM skills."

Microsoft: "80% of jobs in the next decade will require STEAM skills."

US Department of Education: "STEAM jobs in the US will grow by 14% between 2010-2020 - much faster than the national avg of 5-8%."

Sluggish changes in teachers' education practices

Outdated curricula and teaching methods not adjusted to today's reality

Growing popularity of extracurricular activities and private lessons

Programming classes

Robotics courses

3D printing at schools

* STEAM - Science, Technology, Engineering, Arts, Math

There seems to be a significant gap between demand for skills posed by the economic development and the current quality of education in both form and content which is served to kids & teenagers all over the world.

Value Proposition

**Make your own robot
while learning
the XXI-century skill set.**

We are creating a home-suited ecosystem which is comprehensive, intuitive and affordable in order to lead the new STEAM revolution.

We have put in place a set of tools covering the full process of designing, building and programming a robot.

We have created an education platform with robots and 3D printers developing engineering, programming and designing skill set.

1st & 2nd gen 3D Printers
&
Skribots
3D Printing

Skribot Factory
Designing

3D Creator / Playground
Designing

Skriware Academy
STEAM education

Skribot App
Programming

Skriware education ecosystem is based on the process of designing, programming and building 3D printed robots (Skribots)

1st gen 3D Printer

Ideal for a first start with 3D printing.

Robust, steel & polycarbonate construction
enhancing precision.

Small and price competitive with
other high-quality producers.

2nd gen 3D Printer

Ideal for beginners as well as more advanced users interested in multi-material 3D printing.

Most effective construction in terms of building volume and size on the market.

A revolutionary UX at the centre of 7" multi-touch, full-colour touchscreen.

SKRIMARKET

Online 3D Model Library and Marketplace

Skrimarket works as a cloud-based platform enabling users to store saved 3D models and trade them with others

It has two fundamental features:

- Personal library of 3D models, both uploaded and created by the user - everything in one place, available free of charge for registered users
- Online marketplace, where users can purchase and talented designers can sell their models for a profit, with Skriware earning commission on completed transactions

Skrimarket is planned to be not only the source of the e-commerce and e-service revenues, but also a place gathering community of creators creating dedicated content, thus creating more value for the potential Skriware customers.

Skribots

3D printed robot models

(set of bricks + electronics kit + manuals)

Arduino-based electronic set, enabling coding via graphic drag&drop mobile app interface (Skribot App) or via Arduino IDE console for programming in C.

Competitive advantage of this system is its scalability and flexibility in terms of robot functionality, which depends on the set of electronic components, 3D-printed parts and coded operations.

Skribots can be upgraded with extra electronic components and new 3D-printed elements, providing new functionality, which is being developed along with the skill of a user

Skribot Creator

An online tool for prototyping 3D-printed constructions (eg. robots, drones) and for placement of electronic parts.

A smart tool linking design with engineering and electronics in a visually attractive form.

Ideal for home and school use to teach:

- spatial visualization ability
- basic modular electronics
- creative design
- planning and execution

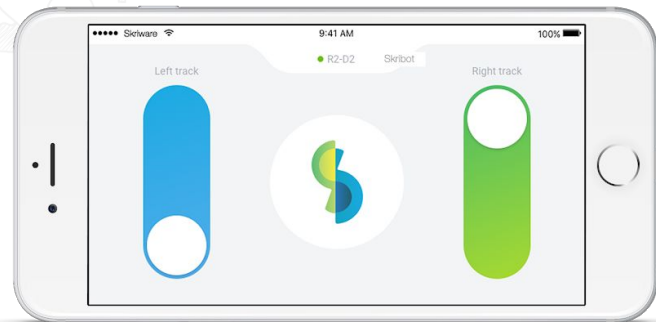

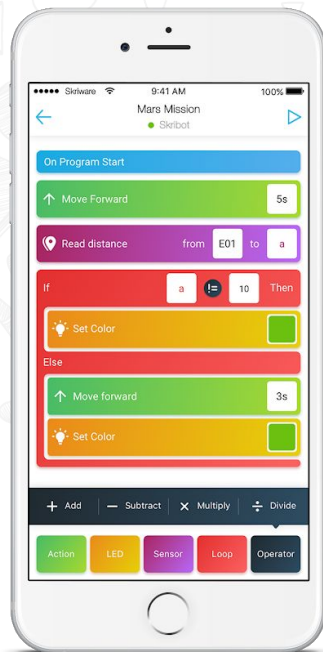

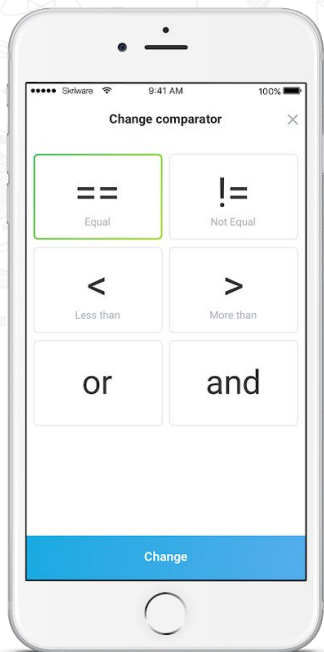

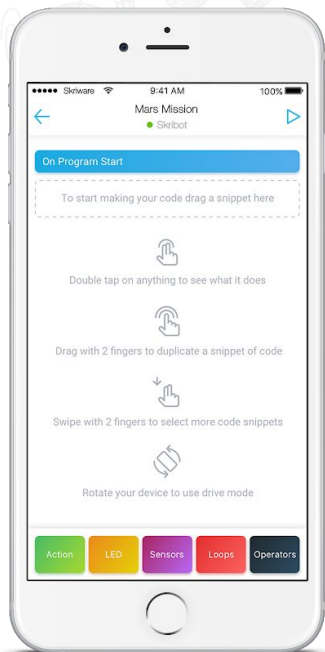

Skribot App

A mobile app explaining programming with a simple, graphic interface used for remote control of a robot.

The app is breaking barriers to programming by explaining complex problems in an easy-to-understand, logical way.

Two modes of the App:

- Hack
(teaching logic and basic programming principles)
- Play
(enabling remote control of any created Skribot model)

Hack mode:
code your
Skirbot functions

Play mode:
control your
Skirbot remotely

Skriware Academy

Online knowledge base developing STEAM skill set across numerous disciplines like design, coding, engineering.

A collection of video tutorials and online courses served in a entertaining way with gamification context.

Space Exploration narrative for the user with the first scenario “Destination: Mars”.

8 missions created around building a Skribot and programming new functions to accomplish commissions.

Skriware Academy is regularly updated with new education content (3D models, lessons) coming from Skriware and our partners.

DESTINATION: **MARS**

This course contains 15 one-hour long lessons which provide:

- Learning the principles of programming
- Analytical thinking
- Arduino experience
- Manual skills development
- Experimenting with robots
- A thorough education in the STEAM field

DESTINATION:
MARS

BY SKRIWARE

STEAM TEAM

Join STEAM Team on the space journey learning awesome skills while upgrading your Skirbot to face new challenges.

**Jack
Kowalsky**

Science Officer
lvl. 3

Weather:

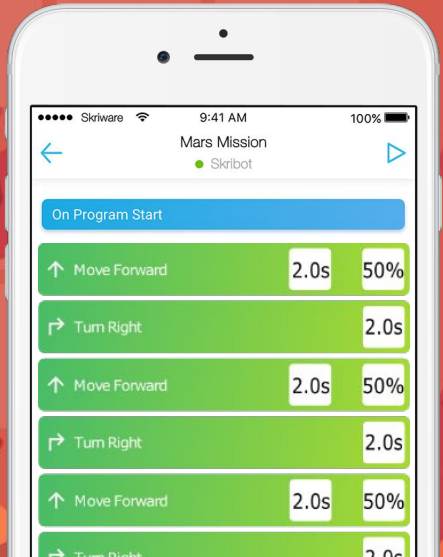

Temperature: -60oC
Wind: 20m/s
Dust density:

Goal of the task:
Students learn that in programming we have to compromise to find the most effective ways. Students learn the concepts of optimization and accuracy.

START

We keep securing various education partnerships in STEAM curriculum creation

Ministry of Education
and Sports in Argentina

Education content testing and
hardware purchase

Pilot implementation in
10 schools in Argentina

Dartmouth University

STEAM materials creation & testing for the
follow-up rollout

3 lessons and proof of concept
created with the Dartmouth faculty

CoderDojo

Prospecting of teachers creating
education content

Reach across 63 countries,
ongoing implementations

Perspektywy Foundation

Media reach and testing of robots for
teaching purposes

Workshops across 25 cities
during summer for 1000 kids

Kids Code Fun

Creating a robotic challenge, workshop
scenarios, lesson plans

Leveraging 5+ years of
experience in teaching kids

Our Achievements:

EY Start-up-Initiative

KICKSTARTER

Top 50 innovative
global startups
(Kairos K50)

Shortlisted for the
EY startup advisory
program
