# Generative AI in 30 days: A DPI30 Offer

Generative AI, such as OpenAI's ChatGPT, is unlocking numerous new use cases for AI in organizations. As with any new technology, however, there is a lot of hype and uncertainty about what it can do, making working with a leader in AI, like Neal Analytics, essential to help cut through the noise.

The Generative AI in 30 days offer is designed to help organizations analyze generative AI use cases and rapidly prepare for deployment of generative AIs. The offer achieves this by leveraging predefined resource deployment procedures and templates from Microsoft and Neal Analytics.

Phase 1
Design workshop

- Identify generative AI scenarios for proof of concept
- Gain understanding of business use case
- Review current state of data and advise on data preparation methodology
- Create initial architecture

Phase 2
Landing zone deployment

- Establish Azure landing zone and generative AI capabilities
- Working session to customize landing zone
- Population of landing zone, showcasing implementation best practices
- Use migration accelerators
- Establish initial architecture get data flowing

Phase 3
Generative AI proof of concept

- Transfer knowledge on data platform, generative AI capabilities & best practices
- Develop approach to tailor OpenAI models
- Provide customer with a go-forward plan aligned with resourcing and architectural needs for the next phase

Offer outcomes

- Identify generative AI use cases in discovery workshop
- Deployed POC of customer-defined generative AI use case via Customer Azure Subscription
- Documentation and knowledge transfer
- Experienced AI experts to guide your team along the scenario refinement & feature definition path
- Proposal for implementation of production solution

Why Generative AI in 30 days?

Cut through the noise

Generative AI is undeniably impressive, but with any potentially revolutionary technology comes a lot of hype and noise that may not always be accurate. By working with Neal Analytics, our clients gain access to AI experts who can help them understand what is and isn't possible with generative AI today.

Explore generative AI

Generative AI represents an opportunity to develop numerous new solutions to support new use cases, but data must be available and accessible to ensure models produce the intended results. This offer is designed to help organizations accelerate their data transformation for use with generative AI solutions.

Quick implementation

As the saying goes, time is money. By leveraging this offer, organizations can achieve rapid implementation of the data environment they require to build out generative AI solutions. This helps lead to a quicker time to market and a quicker time to value for those new solutions.

Leverage AI experts

Neal has been a leader in data and AI since our founding in 2011 and have helped deliver successful migration and modernization projects for dozens of Microsoft customers. In fact, Microsoft's confidence in Neal Analytics as a leader in AI has lead to Microsoft tapping Neal as one of the first partners to work on their OpenAI projects.
