

Crux Overview

About Crux

Founded in 2017 with \$155M in funding from leading data practitioners. Crux is a data engineering and operations platform that provides immediate access to thousands of datasets through their cloud-based technology. Crux accelerates data integrations from external sources by removing the data engineering, operations, and wrangling obstacles. Crux helps customers harness the power of external data and accelerate time to value with data insights. Crux simplifies the onboarding of external data into Analytics Hub and BigQuery.

Provides access to 265+ data sources already connected with pre-build pipelines and 25,000+ active data pipelines.
14,000+ datasets with simplified ingestion and processing.

Business Challenges Addressed & Use Cases

- Accelerates the onboarding of data
- Simplifies data transformations
- Automatically monitors and observes data for seamless operations over time
- Yields unique insights and competitive advantage for customers

Key Differentiators

- Enterprise Security: Ensures data suppliers, clients, and partners are protected and compliant
- Move data engineering and ops to a cloud-based managed service (24/7 Data Operation)
- Strong footprint in FSJ.

Azure Relationship
