DATAGUISE

Microsoft Information Protection

Better protect your sensitive information—anytime, anywhere.

Microsoft Information Protection helps customers protect their sensitive data – wherever it lives or travels. Microsoft Information Protection enables you to discover, classify and label, protect and monitor sensitive information across a variety of locations including apps, devices, cloud services and on-premises repositories. You can customize your classification and labeling taxonomy to meet your specific needs, and apply a range of protection actions to your data based on its sensitivity – such as encryption, access restrictions, or visual markings. Microsoft Information Protection helps you meet your internal security goals and external compliance requirements.

Identify and understand sensitive information across your data landscape

Apply flexible protection policies based on your unique requirements
Extend information protection to 3rd-party apps and services using the multi-platform Microsoft Information Protection SDK, which enables you to integrate labeling and protection experiences into your apps and services

How Dataguise integrates with Microsoft Information Protection

The Dataguise and Microsoft Information Protection (MIP) integration enhances personal data protection competencies on-premises and in the cloud. Dataguise for MIP can scan and tag Microsoft Office files and PDFs with MIP-compatible labels across cloud platforms and on-premises. Once tagged, MIP can read and perform downstream actions, such as file encryption, or implement access control based on the labels, enabling organizations to apply data protection policies.

CUSTOMER BENEFITS

- Greater scale and performance in personal data discovery.
- Discovery of sensitive elements in structured and unstructured data — even when not in Microsoft products.
- Data scanning and tagging support in Azure, AWS and Google Cloud.
- Complete protection of personal data, whether being migrated to the cloud or used in the cloud.
- Offers full enterprise platform coverage in the discovery and protection of sensitive data in Microsoft products, PDFs, Windows file systems, and SharePoint.
