How it works

MiiCare is a preventative, AI-powered healthcare platform which helps healthcare organisations and families evaluate, plan, and drive positive health impact to older adults and those with chronic conditions. Our integrated, human-centred IoT technology for the home has been co-designed with older adults supported by healthcare authorities to help prevent physical and mental health decline while keeping care providers up-to-date on wellbeing. It monitors the physical, psychosocial & physiological parameters of a user and delivers personalised digital therapeutics and behaviour change.

Capture

MiiCube collects data from IoT sensors and telehealth devices within the home

Analyse

Our AI engine analyses the data to learn the behaviour and health trends of the user.

Inform

Health insights and alerts are shared with family and caregivers to prioritise care.

Impact

Monica interacts with users to best support their health with digital therapeutics.

Integrated care platform

Vitals & telehealth

Population & single view

AI health insights

Secure messaging

Set alerts & notifications

SOS call system

MiiCare supports your clients' care plans, out of hours. When your team cannot be there, Monica can help support older adults' adherence to their care plan, whether it is reminding them to take their vital readings, medicine, hydration, or to stay active. Our data-rich dashboard allows domiciliary care providers to understand what happens in the absence of a carer while providing an incredible value add to family members who want added peace of mind.

Albert's story - Bracknell Forest

2 years before MiiCare

- 4+ overnight carers/week
- Struggled to manage chronic conditions
- Lonely and dependent
- High-risk of mental and physical health decline

Homebound & dependent

Cost: £1,161 per week

2 weeks after MiiCare

- 2 welfare checks/day
- Consistent medicine and hydration routines
- Confident and more independent
- Measured health improvement

Active & independent

Cost: £430 per week

Specifications

MiiCare developed a digital health coach to help vulnerable adults manage their chronic conditions and support commissioners and service providers in delivering quality care.

- Track live care staff visits, activities, & more

Secure

- GDPR compliant
- Bespoke secure login & messaging
- Home monitoring & security while away

Our impact

Organisations that have entrusted MiiCare to provide better care to their customers span across the healthcare industry. This includes, but is not limited to, county councils, care commissioning groups, care homes and domiciliary care services. The benefits of our solution are not only limited to the end users but also trickle down significantly to our clients who have evidenced cost savings without sacrificing on the quality of care they provide to their customers. Some of the benefits that came forward as result of MiiCare pilots by our clients are as follows:

Stockport MBC/ NHS

£1,613 improved cost efficiency in 2 months via one kit
No UTI related falls or incidences since originally baselined

Stock-on-Trent City Council

£2,100 improved cost efficiency over 7-week period via one kit
Complete control of MiiCare and health monitoring of patient with family members

Somerset County Council

£1,344 improved cost efficiency over 4 week period via one kit
Efficient Resource Utilisation as district nurses directed elsewhere through evidenced hydration and medicine prompts and actions

Bracknell Forest Council

£1,100 improved cost efficiency per week via two kits
Improved healthcare outcomes and prolonged independence for both residents
