

A cloud service that promotes sustainable management that enables integrated management of ESG data

ESG Management Support Service (ESG-MSS)

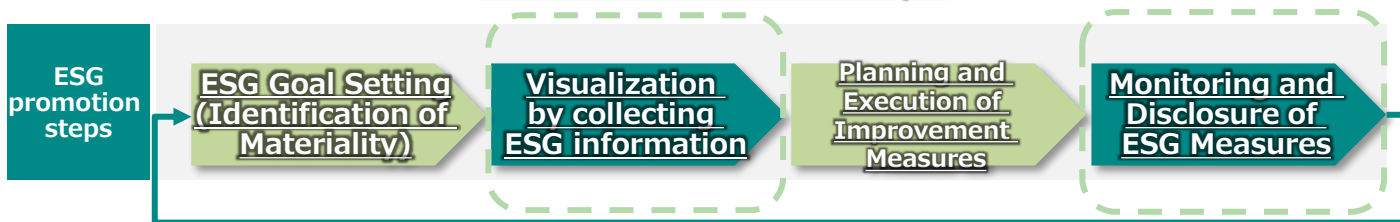

Background

In recent years, governments and institutional investors around the world have been demanding companies to disclose information about how to deal with increasingly serious environmental problems such as climate change. There is also growing interest in human capital, etc. When companies respond to this demand, the issue is that it takes a lot of manpower and time to collect a wide range of ESG (environmental, social, and governance) data.

Value provided

In order to efficiently collect ESG-related data (KPI) required by law and IR, this service allows users to easily define the data they need and digitally supports everything from collection work to analysis, bringing contribution to the promotion of ESG management.

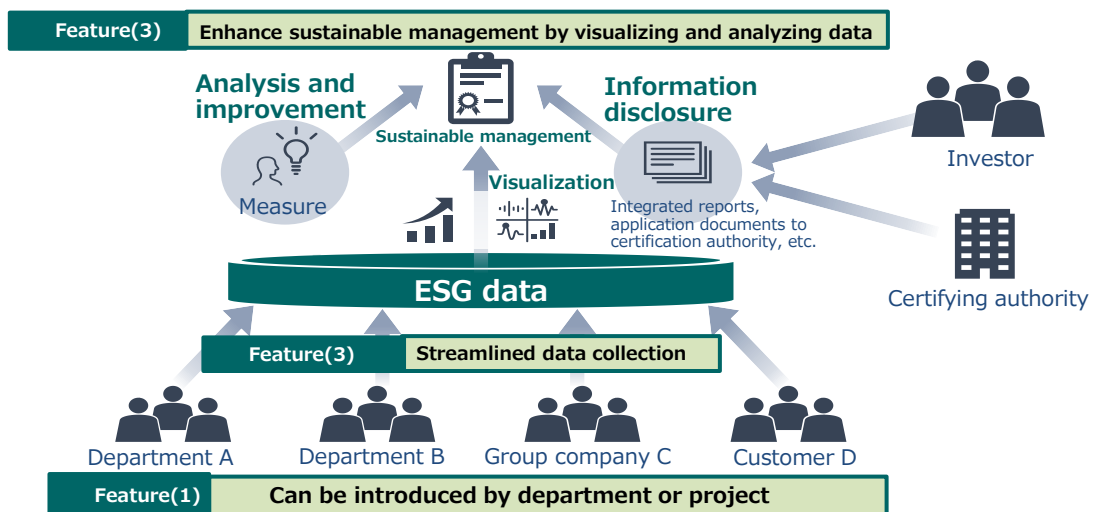

ESG-MSS Service Scope

Features

Realized a service with the following features through verification within Hitachi:

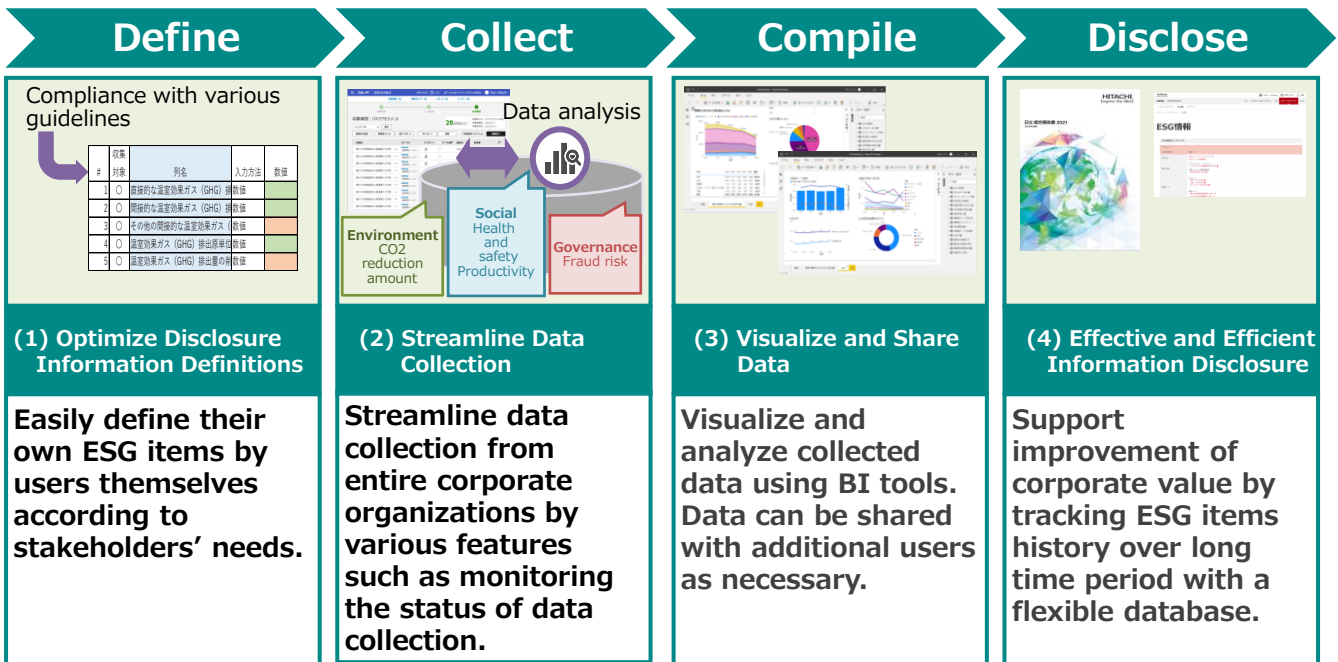

- (1) It is possible to start small by department or project and expand the scope of use after introduction.
- (2) Data provision requests are made from cloud services, and status management of collection and error checks are automated.
- (3) Data can be flexibly rearranged due to organizational changes, etc.

Recommended for customers with the following challenges:

- ✓ There are many departments to request ESG data collection, and it takes a lot of man-hours just to collect and organize the data.
- ✓ In collecting data in response to requests from outside the company, system update costs are increasing.
- ✓ It takes time and effort to rearrange data due to changes in data items and organizations.
