Empower you colleagues to know your data and make the best decision.

Successful modern enterprises rely on data to support their processes but also want to make decisions based on their data. The right data from the relevant systems joined in a manner that assures high quality has become fundamental. Add Power BI as a reporting tool and you will make sure your staff has the best information at hand to make the right decision.

CHALLENGES

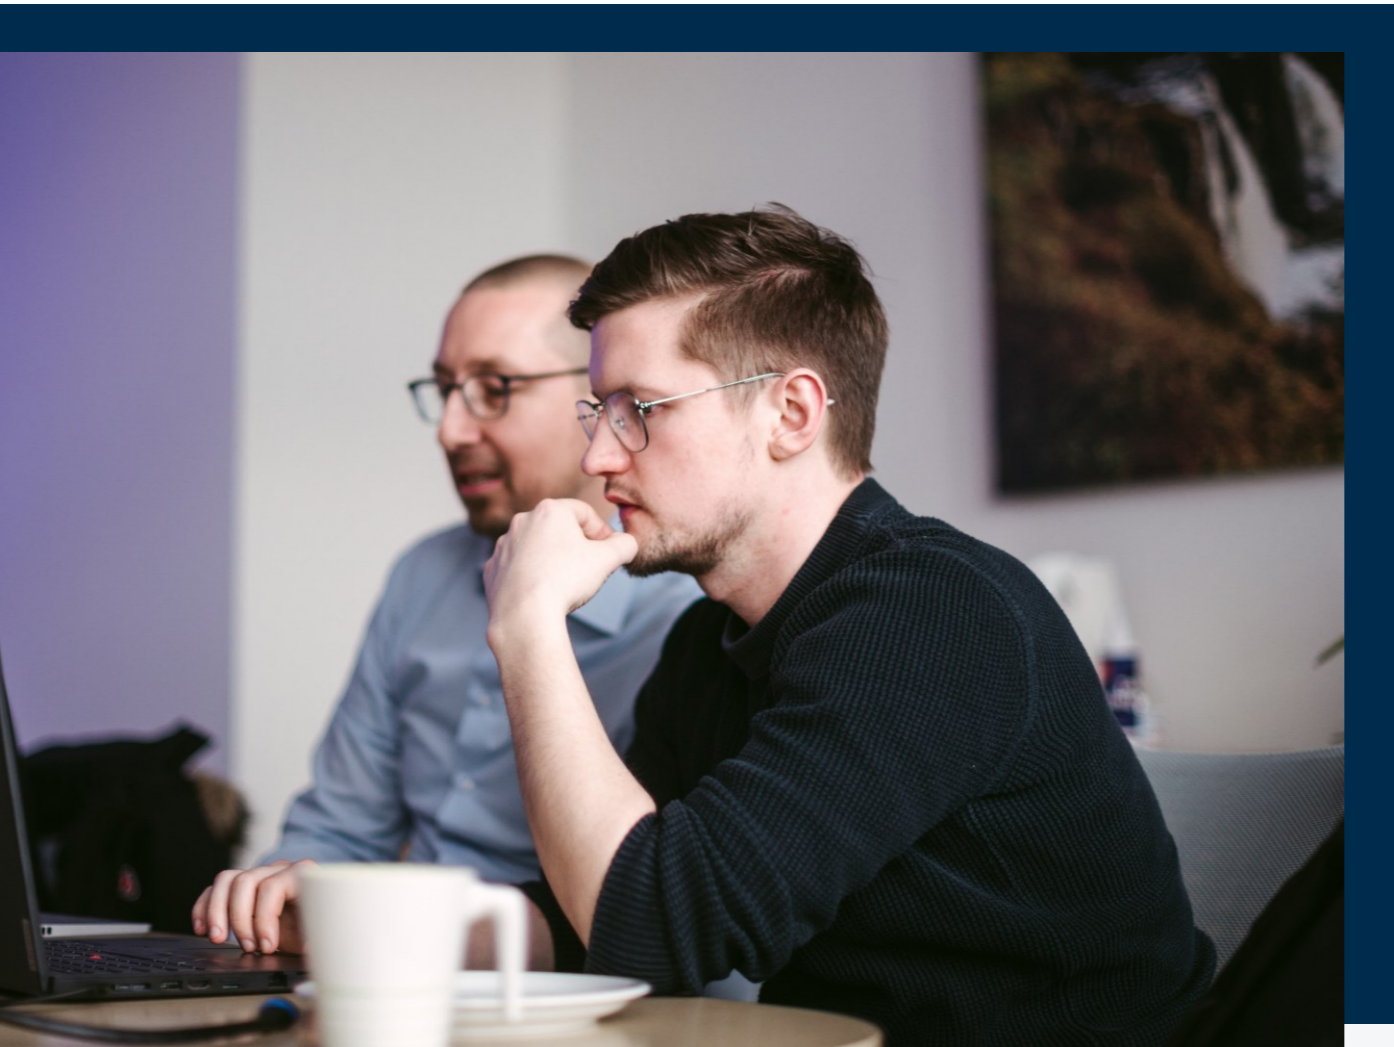

Many companies are still run on Excel. A great tool, but complicated when used in teams and often found in combination with manual uploads and data correction, hence prone for errors. In addition KPIs are not aligned centrally, which leads to hidden misunderstandings when people talk about the same KPIs but have different understandings.

IDEAL SOLUTION

Our clients aim for a solution that allows them to bring benefits to their business fast and avoids risks. A reliable and automated data landscape assures quality and reduces manual labor. Pre-Processed KPIs assure that everyone is on the same page. Assisted by a use-friendly Tool such as Power BI makes analysis go well!

DESIRED OUTCOMES

A modern data landscape should be supporting the business in the background, making sure that data does not need to be exported and imported manually. Users can access a good quality data to make reliable decisions and analyse data without misunderstandings.

ERGON

Understand your own data

Let us work together to improve your data analysis. Our approach and over twenty years of experience can help you satisfy your customers and your business better than ever before. Benefit from approach of an azure based implementation.

1

ETL

We automate and secure your data loads from internal and external sources into the Azure Cloud. No more manual up- or downloads are necessary.

2

Data Warehouse (DWH)

Your data is loaded via ETL into the Azure DWH and pre-processed to assure performance and calculate KPIs. Your users can access the data from this single point of truth.

3

Reporting

We build initial reports allowing you to start working with your data straight away, on top we enable your business to build and publish reports for their colleagues to allow better team-work.

ERGON Datenprojekte Data Landscape & Microsoft Azure

Improve your data analysis with ERGON Datenprojekte based on Power BI and Microsoft Azure. Together we can archive an approach that allows to iteratively update your existing tool and to provide benefits to your clients and business right from the start!

Security, scalability and seamless integration

Microsoft Azure allows secure, scalable and user-friendly solutions for your customers and business.

Integrated deployment and automated testing

Using Azure Dev Ops we can setup and automate complex deployment processes and stabilize the new solution with automated tests.

Iterative step-by-step cutover to the improved data landscape

With our experience we can use Microsoft Azure to develop in an iterative manner and cut-over quickly 'module for module' instead with a big bang after a while.

Customer success: A new Data Landscape!

“ERGON has helped to work out our new data-landscape. We included all relevant systems such as ERP, CRM and our campaigning-tool, linked also to Google Ads. We can now focus on analyzing our data and assure that our processes get the right information at the right time.” Martin, CIO Hamburg based e-commerce software company.

Easy setup, no build up time

Using Microsoft Azure made it easy to set up everything for the client. There was no IT Department necessary, as all could be done by us for the client.

Iterative Process

To deliver is our main task. Using Microsoft Azure we were able to deliver in quick iterations so that the client know and to influence what he was getting from the beginning.

Integrated Deployment to provide functionalities to customer quickly

Especially as a startup it is important to provide clients with the functionalities needed to convince. Using Azure we were able to quickly roll out functionalities, as they were needed

Get in touch with us and find out how we can start the implementation.
