Tableau to Power BI migration

Cost is one of the primary factors driving Tableau to Power BI migrations. In fact, considering the monthly per user cost of Power BI Pro is $25 less than Tableau, organizations can stand to save a substantial sum moving to Power BI.

Additionally, organizations leveraging AI and machine learning may find Power BI advantageous due to its AutoML capabilities and close integrations with other Microsoft services such as Azure Machine Learning and Azure Cognitive Service.

Tableau to Power BI migration

Program Expected Outcomes

At the conclusion of the 1.5-month Tableau to Power BI migration assessment engagement, your organization will come away equipped with a plan with a clear roadmap for moving your Tableau visualizations to Power BI.

The plan will provide customers with:

- An Executive Summary covering key considerations and plan milestones
- An inventory of assets that need migrating
- Cost analysis and Power BI pricing estimates
- Usage analysis for current environment
- Logical and physical architecture diagrams
- Remediation guidance planning
- Power BI Usage Insights & Tableau reporting to facilitate migration

Frequently Asked Questions

Why do we need a migration assessment?

Organizations with a large or complex data visualization environment may find migrating from one solution to another is more complicated than simply migrating data and recreating dashboards. This assessment helps organizations determine the best possible data visualization architecture with more accurate cost estimates and timelines.

Who should apply?

This offer is perfect for organizations who currently use Tableau for data visualization but are interested in exploring whether it makes sense to migrate to Power BI. Customers can leverage this assessment to evaluate whether Power BI makes sense for them and provides clear guidance for beginning their migration.

Why Neal Analytics?

Neal Analytics, a Fractal company, is an infrastructure, data & AI, and digital & app innovation Microsoft Solutions Partner that cost-effectively accelerates data-driven transformation initiatives for enterprises committed to the Microsoft cloud. Through the application of AI/ML, data & cloud engineering, BI, edge & IoT, and digital customer experiences, we deliver solutions from platform integration to application development that deliver verifiable and measurable customer value.
