

PERFORMANCE

Our P Module provides an overview of all essential performance parameters of your production plants and individual stations.

Output

- 1 current status of production with relevant comparison
- 2 quantities of the parts produced with customizable observation periods
- 3 history of all produced parts with relevant informations

Overall Efficiency

Total efficiency of production per day in a freely selectable period showing the overall efficiency (OEE), the availability, the effectiveness as well as the produced parts' quality.

Live-Monitoring

The monitoring overview visualizes the current status of the system, the currently producing products, the malfunction information and the state of the station in the past 12 hours

Error Evaluation

Additional display of the progression of processing times per produced parts and the most frequent malfunctions

Analysis

Total number and total duration of shutdowns per day in any period

Representation Error Type

Visualization of the type of fault responsible or the longest downtime of the plant
