Ed-Fi Implementation Suite for Microsoft Azure

K-12 Interoperability Platform + Analytics in Minutes

Timely access to holistic student information and the ability to quickly transform that information into actionable insights to improve student outcomes is a top priority across K-12. Implementing Ed-Fi Standards and Technologies facilitates the interoperability and analytics required to generate and disseminate this information easily and effectively in real time. However, the time, cost and technical complexity of fully deploying and maintaining Ed-Fi Standards and Technologies remains a challenge for many districts today. That's where IntePort comes in.

What is IntePort's Ed-Fi Implementation Suite?

IntePort's Ed-Fi Implementation Suite for Microsoft Azure eliminates the time, high cost and technical complexity of deploying and maintaining Ed-Fi Standards and Technologies. It is a fully automated, end-to-end Ed-Fi solution that deploys to an Azure platform as a service (PaaS) architecture in ~20 minutes with no cloud or system integration expertise required.

It also deploys robust, interactive Assessment and Early Warning System analytics through Microsoft Power BI. These analytics combine SIS and standardized testing data together in pre-built, fully customizable data models, dashboard visualizations and publishable reports that are role-specific, easy to understand and easy to securely disseminate and share – empowering teachers and other front-line educators with the timely, holistic information they need to drive optimal outcomes for each individual student.
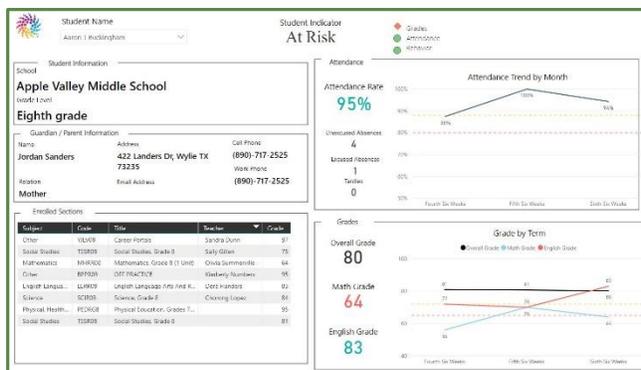

Why IntePort's Ed-Fi Implementation Suite?

Industry Leading Analytics

- Early Warning System and Assessment analytics based on the Balfanz model.

- Role-based, auto-populated and fully customizable dashboard visualizations in Power BI provide timely, holistic insights around student outcomes

Fast and Secure

- ~20-minute, fully automated deployment frees limited district resources to focus on empowering staff to make data-informed decisions

- FERPA-secure, user specific security ensures individuals only see the data they are authorized to see

Flexible and Cost Effective

- Maintain and scale - from a single district to a statewide solution - at a fraction of the time and total cost of other solutions

- Low-cost ongoing maintenance and support with optional support packages available for integrating Ed-Fi certified SIS and Assessment vendor data

- Microsoft Azure PaaS offers lower hosting cost options and more flexibility than other Ed-Fi solutions hosted on premise or on cloud virtual machines (IaaS)

If you need timely access to student data without the high cost or technical complexity, IntePort can help!
