

# END-TO-END EMAIL TESTING

FOR SOFTWARE TEAMS  
OF ALL SIZES

## GIVE CONFIDENCE TO DEVs, QAs & END CLIENTS

The Imitate Email sandbox mail server and associated tools keep developers, testers and end clients focussed on delivering your software, not setting up secondary infrastructure.

It improves software quality through a streamlined development environment while minimising the risk of accidentally spamming real users. The integration testing support delivers confidence from release to release that critical email based functionality is regression free.
