Power Apps Fast Start

With the appropriate setup, getting started with Power Apps is easy thanks to it's no code/low code platform.

In this 3-week engagement, Insight technical experts will ensure clients start their Power Platform journey on the right footing, by helping with platform configuration, getting started with app development, and outlining a governance plan to ensure the client is always in control.

What to expect…

CLIENT PREP   before assessment begins

- Identify platform and process owners
- Outline potential processes to automate
- Prepare access to Office 365

GETTING STARTED   1 day

- Initiation call with project sponsor and participants
- Introductions & power platform overview
- Bring your own app

GOVERNANCE   **4** days

- Get your licensing in order
- Power Platform admin responsibilities
- Secure and restrict your environment
- Define your Power Platform governance plan

BUILD   **10** days

- App in a Day (AIAD) Workshop
- Build your App Proof of Concept / Development Workshops

Example Process Flow Diagram

This Fast Start will result in a deployment process flow diagram that is critical when automating a process to understand the steps and actions involved in deploying your apps as well as your first proof of concept app.

CLIENT STORY:
Major Supermarket Chain

The challenge

A large supermarket chain requires stores to complete hundreds of compliance, food safety, stocking, and marketing tasks daily and needed to replace an expensive and far too complex subscription-based software system. Additionally, the central office wanted a simple system, which they could distribute tasks on an individual department or store basis for employees.

The solution
Insight built a Power Platform solution that completely automated their process and enabled store managers real-time task management using mobile devices.

The outcomes

- The ease of use of the Power Apps solution led to instant adoption by end-users and admins

- More than 1 million tasks were assigned and completed in the first month

- Management was able to get real time updates on task complete status, as well as quick visibility using Power BI dashboards
