Automate without boundaries and move beyond RPA. Scale rapidly with Tulip, a hyperautomation platform powered by AI & Tech Automation
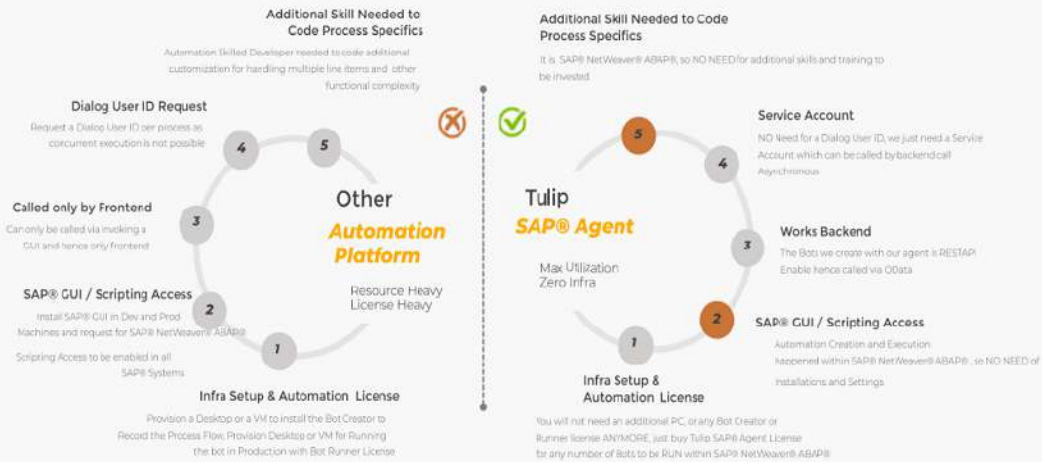

Implement desktop less environment and unlock limitless scalability with the Tulip platform. Elevate business processes with exponential performance at minimal investment on infrastructure and increased ROI.

Get started
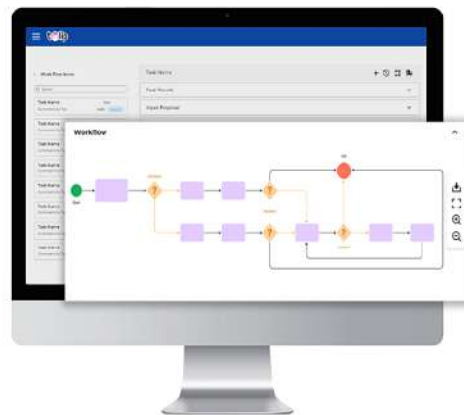

What is TULIP for SAP® customers?

No More Automation outside

Other
Automation Platform

Resource Heavy
License Heavy

Additional Skill Needed to Code Process Specifics
Automation Skilled Developer needed to code additional customization for handling multiple line items and other functional complexity

Dialog User ID Request
Request a Dialog User ID per process as concurrent execution is not possible

Called only by Frontend
Can only be called via invoking a GUI and hence only frontend

SAP® GUI / Scripting Access
Install SAP® GUI in Dev and Prod Machines and request for SAP® NetWeaver® ABAP®
Scripting Access to be enabled in all SAP® Systems

Infra Setup & Automation License
Provision a Desktop or a VM to install the Bot Creator to Record the Process Flow, Provision Desktop or VM for Running the bot in Production with Bot Runner License

Tulip
SAP® Agent

Max Utilization
Zero Infra

Additional Skill Needed to Code Process Specifics
It is SAP® NetWeaver® ABAP®, so NO NEED for additional skills and training to be invested

Service Account
NO Need for a Dialog User ID, we just need a Service Account which can be called by backend call Asynchronous

Works Backend
The Bots we create with our agent is RESTAPI Enable hence called via OData

SAP® GUI / Scripting Access
Automation Creation and Execution happened within SAP® NetWeaver® ABAP®, so NO NEED of Installations and Settings

Infra Setup & Automation License
You will not need an additional PC, or any Bot Creator or Runner license ANYMORE, just buy Tulip SAP® Agent License for any number of Bots to be RUN within SAP® NetWeaver® ABAP®

Tulip's Secret Sauce

Workflows

In order to execute an end-end business process, many bots come in together in a particular sequence. Each bot derives its inputs from the previous element in the workflow. In addition to bots, there may be other elements like user inputs and user approvals in the sequence. The grouping of the various elements in such sequences constitutes Workflows. Tulip offers you a comprehensive Workflow Designer Studio where you can either upload BPMN files or create your custom made bots.

Core Features

01

Powerful Automation Across Tech Stack Including

- Any browser-based workflow using UI or automation Programs
- Desktop-based workflows on Windows based applications
- Linux or macOS applications
- Multiple apps used to

02

Multiple Automation Agents

- To achieve 100% savings on Infra scaling & Additional SOX Cost
- Eliminate GUI based automation for SAP with SAP NetWeaver® ABAP® Automation Studio
- Increase speed and reliability with Low-code RPA Agent without traditional coding
- Integrate hyperautomation

03

Workflow Studio BPMN Process modeler

- Move from user processes to business process automation
- No more use for code-writing
- Drag & drop task mechanism
- Attach the Automation Agent and Bots
- Add it to forms and

04

Desktop-less Automation

- 80% SAP Automation Agent and RPA Agent enabled for desktop-less environment
- Cost savings on infrastructure
- Avoids latency and increase productivity
- Scale at 10x speed with hyperautomation platform.

05

Platform Integrations

- Supports multiple with its provisions
- Multiple data formats and connectors compatibility with HTTP, FTP, MQ, Email, APIs etc.
- Integrate with leading platforms like Microsoft Excel, SAP, Salesforce, Netsuite, CRMs & ERPs

06

Cloud native ready Automation

- Provides rapid delivery and iteration on application functionality
- Micro-service architecture
- Talking with each other via APIs
- Simplifying the deployment and upgrade difficulties
