Google Places Coordinate Refresher

Integration Instructions

Configuration

- 1. Provision the offer through Azure Marketplace web portal

- 2. Invoke configuration end-point (one-time)

  POST to '**/api/config/place-watcher**' with the following params:

  googlePlacesApiKey: Your Google Places API key. This will be used to make Place Details requests to check the places that you want the service to observe for coordinates changes.

  webhookURL: The URL that you want to have called when a change in coordinates is detected for any of the Google Places you have requested us to observe.

Service Usage

Your Back-end

Our Service

1. Provision the offer through the web portal

2. Initialize configuration

(INPUTS: Google Places API Key, webhook URL)

POST /api/config/watcher
