

Cyber Insurance Review

Map your business cyber insurance carrier requirements to environment controls ranked by priority and impact to your security posture.

Cyber Insurance has become a critical need. Obtaining and retaining coverage at an affordable cost requires additional effort and maximum scrutiny. Leverage KIZAN's subject matter experts to identify gaps to become a less-risky customer during insurance audit processes.

KIZAN utilizes a variety of tools to gather data about your environment. That data is analyzed, documented, and included in this assessment. From there, a human will review and compile actionable insights that will increase security posture and prioritize cyber security audit requirements.

Cyber Insurance Review Benefits:

- ▶ An aggregated risk assessment extending beyond standard compliance frameworks
- ▶ Identify vulnerabilities and weaknesses to provide insights into potential business risks
- ▶ Roadmap next steps to mitigate gaps and enhance security and compliance posture
- ▶ Increased awareness of cybersecurity risks

"Cyber insurance is no longer a nice-to-have, it's a must-have. In today's digital age, every organization should have a comprehensive cyber insurance policy in place to protect against the inevitable cyber attacks."

Bruce Schneier
Cybersecurity Expert and Author

Choose the option right for you!

GOOD

Basic Services

- ▶ Security Posture Review, including:
 - Identity
 - Email
 - Endpoints
 - Remote Access
 - Backup and Recovery
 - User Education / Training
- ▶ External validation of existing controls and procedures
- ▶ Identification of security enhancements and optimizations

BETTER

All services included with the Basic option, plus:

- ▶ Internal and external network vulnerability scan
- ▶ Dark Web Scan
- ▶ M365 Information Risks Executive Summary
- ▶ Guided assistance with cyber insurance application

BEST

All services provided with the Basic and Better options, plus:

- ▶ Active Directory Security Assessment
- ▶ Microsoft Cloud Security Baseline Assessment, including:
 - Asset management
 - File storage and data protection
 - Privileged access
 - Vulnerability management
 - Incident response
 - Logging and threat detection
 - Network security
 - DevOps security
 - Governance and strategy
