INDUSTRIAL
SAFETY

We take care of the workers

Exocare is an IoT solution, developed by 'Actiontracker Solutions', which allows you to manage and automate security and worker activities efficiently, accessing information in real time from almost anywhere, 24 hours a day, 365 days a year.

It is a multipurpose platform that works as a comprehensive solution that turns workstations into safe and optimal environments to considerably improve the productivity of your company.

¡IF YOU CARE, WE CARE!
CEO **Actiontracker**. Eloy Martinez

EXOCARE

Takes care of your company

6.500

Die of occupational diseases

7.500

Die every day due to unsafe and unhealthy working conditions

1.000

Die because of work accidents

According to figures recently published by the International Labor Organization (ILO), each year **2.78 million** workers die from sick leave; represented by **2.4 million** occupational diseases and **374 million** by non-fatal occupational accidents. It is estimated that lost working days represent around **4%** of the Gross Domestic Product (GDP) worldwide.

<https://www.ilo.org/global/topics/safety-and-health-at-work/lang--es/index.htm>

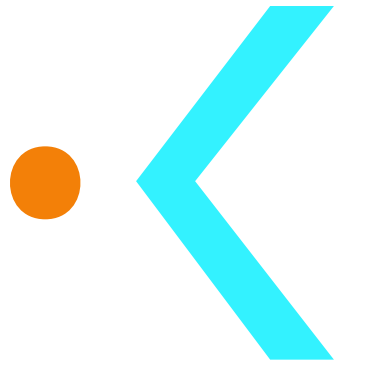

Work accidents by sector

In 2019, around **3,427.6** work accidents with sick leave were calculated for every **100,000** affiliated salaried workers.

Work challenges

ON3 BRAIN APP

Thanks to Exocare you will be able to connect with your workers through a wearable device or Wearable mobile App and anticipate possible breaches of the security of your organization.

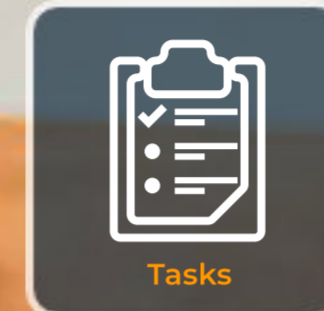

Through our innovative proposal, you will be able to know information in real time about the productivity of your company and thus make immediate decisions, or even predictive ones, to obtain better results..

Always Connected

At Actiontracker we develop IoT solutions that allow you to maintain direct, fluid, efficient and two-way communication with your workers.

With our robust -wearable- device that we have called 'Cogni', improve the operability and security in each area of your company, reducing human errors, saving costs and therefore increasing profitability.

ACTION TRACKER
CONNECTED BRAINS

BeSafeWearable

Share and collect data and information in real time for better decision making.

Fall detection and man dead or immobility by means of AI

App training with IA SOS by shaking the mobile or pressing a button

Task management

Record of availability, activity and work time

- It Improves the management of machinery and its maintenance, capturing data from its sensors (tanks, batteries, hours of use)
- It allows to avoid collisions between machines.
- It makes it possible to manage time in maintenance of mechanisms.
- The OnBrain solution captures data from machinery and workers, and connects them between them and the cloud, in a bidirectional way. by using the available communications network whether it is Wi-Fi, mobile, low-power network (LPWAN) or satellite.

MONITOR AND MANAGE

Emergency (SOS)
Issue alerts in case of emergency to the control panel and/or predetermined contacts.

Tasks
Manage security through a configurable and scalable warning system.

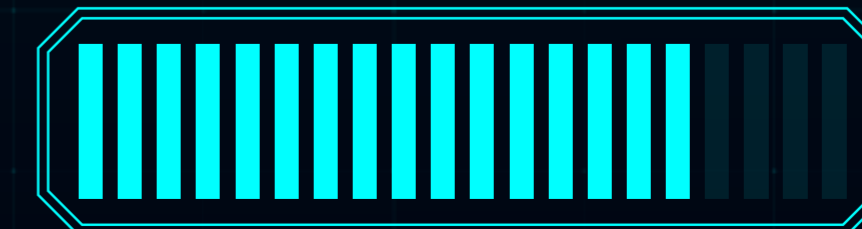

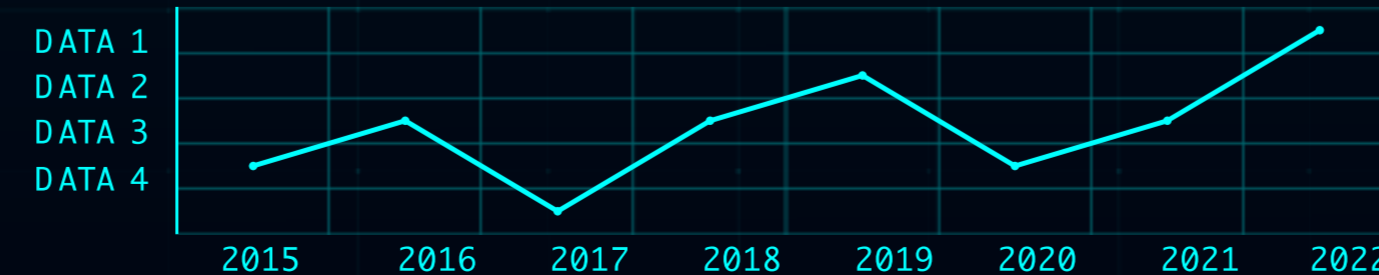

Location
Know the exact and real-time position of your team.

Messages / Alerts
Send instructions and key information via Email, text messages, voice, prerecorded

Deadman
Reduce the risk of activity errors or unexpected accidents.

Tour
Track worker displacement.

- OPTION B ●●●●●●●●●●
- OPTION C ●●●●●●●●●●

Sensors and devices

Detect worker status and store data.

SDKs & APIS

Build and integrate your systems and applications

Cloud

Web hosting, applications in the cloud for greater flexibility.

Gateway & Edge

Connect sensors and devices to the cloud.

Web frontend & backend Apps

Interact with users using centralized apps and data.

Help and Support

Help with decision making.

Data transfer and analysis

Generate Kpis and Smart predictions

THE IOT SOLUTION THAT CONNECTS THE WORKERS

MONITORING YOUR WORKERS

Monitor each activity of your workers through a monitoring and task management system

ACCIDENTS ALERT

With Exocare, reduce the risk of errors in activities or accidents, by means of a Wearable you can automatically activate an alarm the moment the worker suffers a fall or accident.

LOCATION

Using a combination of suitable outdoor technologies (GNSS), know, in real time, the exact location of your workers, machinery and assets. Now, for interiors, the Global Navigation System (GNSS) allows obtaining the location of relative positions between workers and machines.

DISTANCE BETWEEN WORKERS

Exocare activates an alarm the moment workers approach each other, thus avoiding accidents during the execution of their activities.

DISTANCE BETWEEN WORKER AND VEHICLE

Our solution activates an alarm when it identifies proximity between vehicles and workers, avoiding possible work incidents such as being run over or falling load on the worker

DISTANCE BETWEEN VEHICLES

The innovative IoT proposal turns on a warning signal when it detects proximity between machinery, reducing the risk of unwanted collisions.

VEHICLE VARIABLES ALERT

Exocare allows you to connect and monitor all types of standard sensors to the 'OnBrain' control unit installed in your vehicles, cranes, or machinery, giving alerts when the values exceed the parameters configured

COMMUNICATION NETWORKS

Send data over appropriate telecommunications networks to environment, whether private or public, Bluetooth, Wi-Fi, low-power networks (LPWAN), mobile telephony, or satellite, respecting the GDPR.

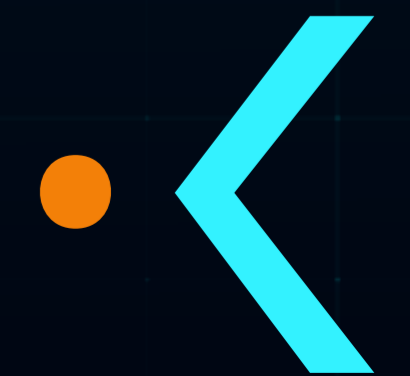

PROHIBITED AND ALLOWED AREA

Notify workers about prohibited or dangerous areas, as well as the traceability of their compliance and their consequences (contextual automatic shutdowns, rapid rescue and incident management system)

WORKERS ROUTE

Track the movement and route of workers in real time
