

# Microsoft 365 Cloud Security Readiness

Improve Security, Efficiency, and User Experience

## IT security is the top priority of most organizations.

Securing data, monitoring potential threats, and protecting intellectual property can be a daunting task for over-extended IT departments. Your business may also need to adhere to certain security frameworks such as PCI, GDPR, CCMC, HIPAA, ISO, and FINRA among others. Focusing on the main points of compromise (Identity, Devices, Apps, and Data), KiZAN will help you prioritize actionable improvements within the M365 suite while leveraging best practices tailored to your organizational and industry-specific needs.

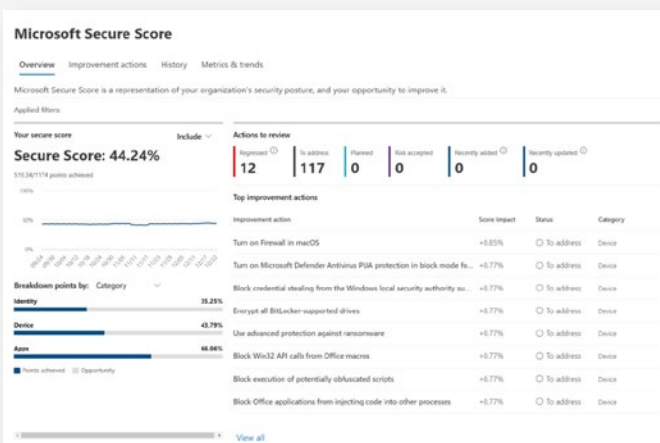

## Let KiZAN help you create a more secure environment

KiZAN architects will educate and guide your organization to leverage M365 and help protect your users, data, and devices while ensuring your business is productive and compliant. This effort will focus on the Microsoft Secure Score which will allow you to better align with standard security frameworks such as HIPAA, NIST, ISO, and others.

## Microsoft 365 Cloud Security Readiness Deliverables:

- ▶ Secure Score Suite Review with a focus on the four main points of compromise
- ▶ Findings and recommendations document to assist you with keeping track of current remediations and vulnerabilities

**NOTE:** Microsoft 365 licenses are not required to benefit from this roadmap but ARE needed to implement the covered solutions.

**Secure Score benefits** include a better understanding of the suite's capabilities and use cases, a mapping of your organizational needs to M365 solutions, and alignment with security best practices and industry standards.
