Insource Data solutions

Process automation, system integration, and data visualization drives informed decisions

We work with your organization to understand your processes and workflows. We will develop solutions that will advance your goals through modern technologies and techniques. We can reduce repetitive tasks, help you understand what stories your data could be telling you, or build a customized solution where your needs come first.

Client Testimonial

"We were referred to Insource by our audit firm when we had fewer than 5 employees, a few hundred thousand in revenue, and 9 health center partners taking risk together on the cost and quality of the care they delivered. Since then, we have grown to more than 75 employees, 19 health center partners, and $40M in revenue. Insource has been a vital partner since 2017 in providing us with flexible, scalable, and highly qualified IT, HR, and finance operations services."

Matt Mullaney
Community Care Cooperative

Business Process Automation

Streamline and automate repetitive tasks to increase efficiency and free up time for strategic work, improving your organization's performance

Data Analytics

Extract insights and patterns from multiple data sources, empowering you to make data-driven decisions and guide your organization's future.

Custom App Development

Build a solution tailored to your specific business needs to optimize processes, improve user satisfaction, and deliver reliable results quickly.

Discover a more flexible way to automate your processes or visualize your data.
