Value Chain

Web 3.0

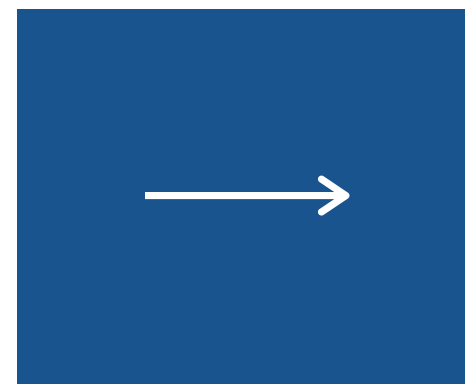

Add value to customers by providing an enhanced store experience by adding a frictionless checkout based on IoT & Blockchain technologies.

Karpine Smart Labels

Blockchain based solution with IOT

- The customer picks the goods
- Place the goods in the Self-CheckOut
- An automated checkout is created with a UPI QR code for checkout.
- The customer makes UPI payment and checkout is complete.

How it Works

01

CATALOG

All the products in the store are imported into the system using a bulk import facility.

02

INWARD

All goods that enter the store are inwards using an RFID sticker attached to the physical product.

03

CHECKOUT

All product details are stored on a blockchain and the goods once placed into the Self-Checkout will instantly read the times and present a payment window to complete the checkout process without any human intervention.

Value Chain Web 3.0

FRictionless Checkout

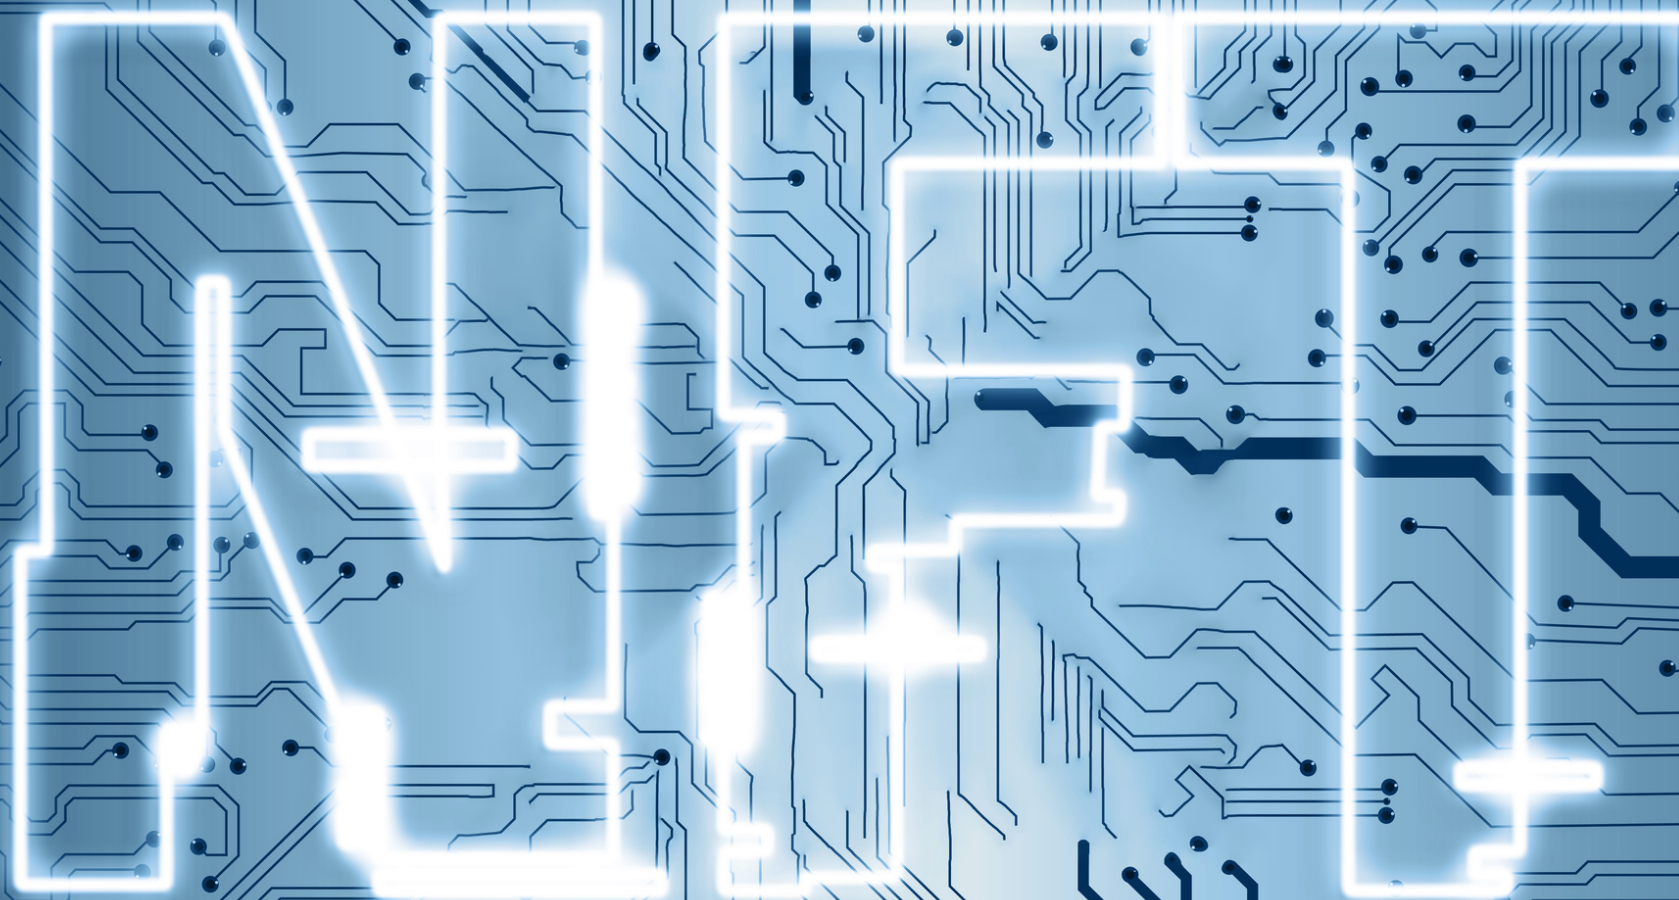

Enhance customer experience by providing an unmanned checkout kiosk.

DIGITAL NFT

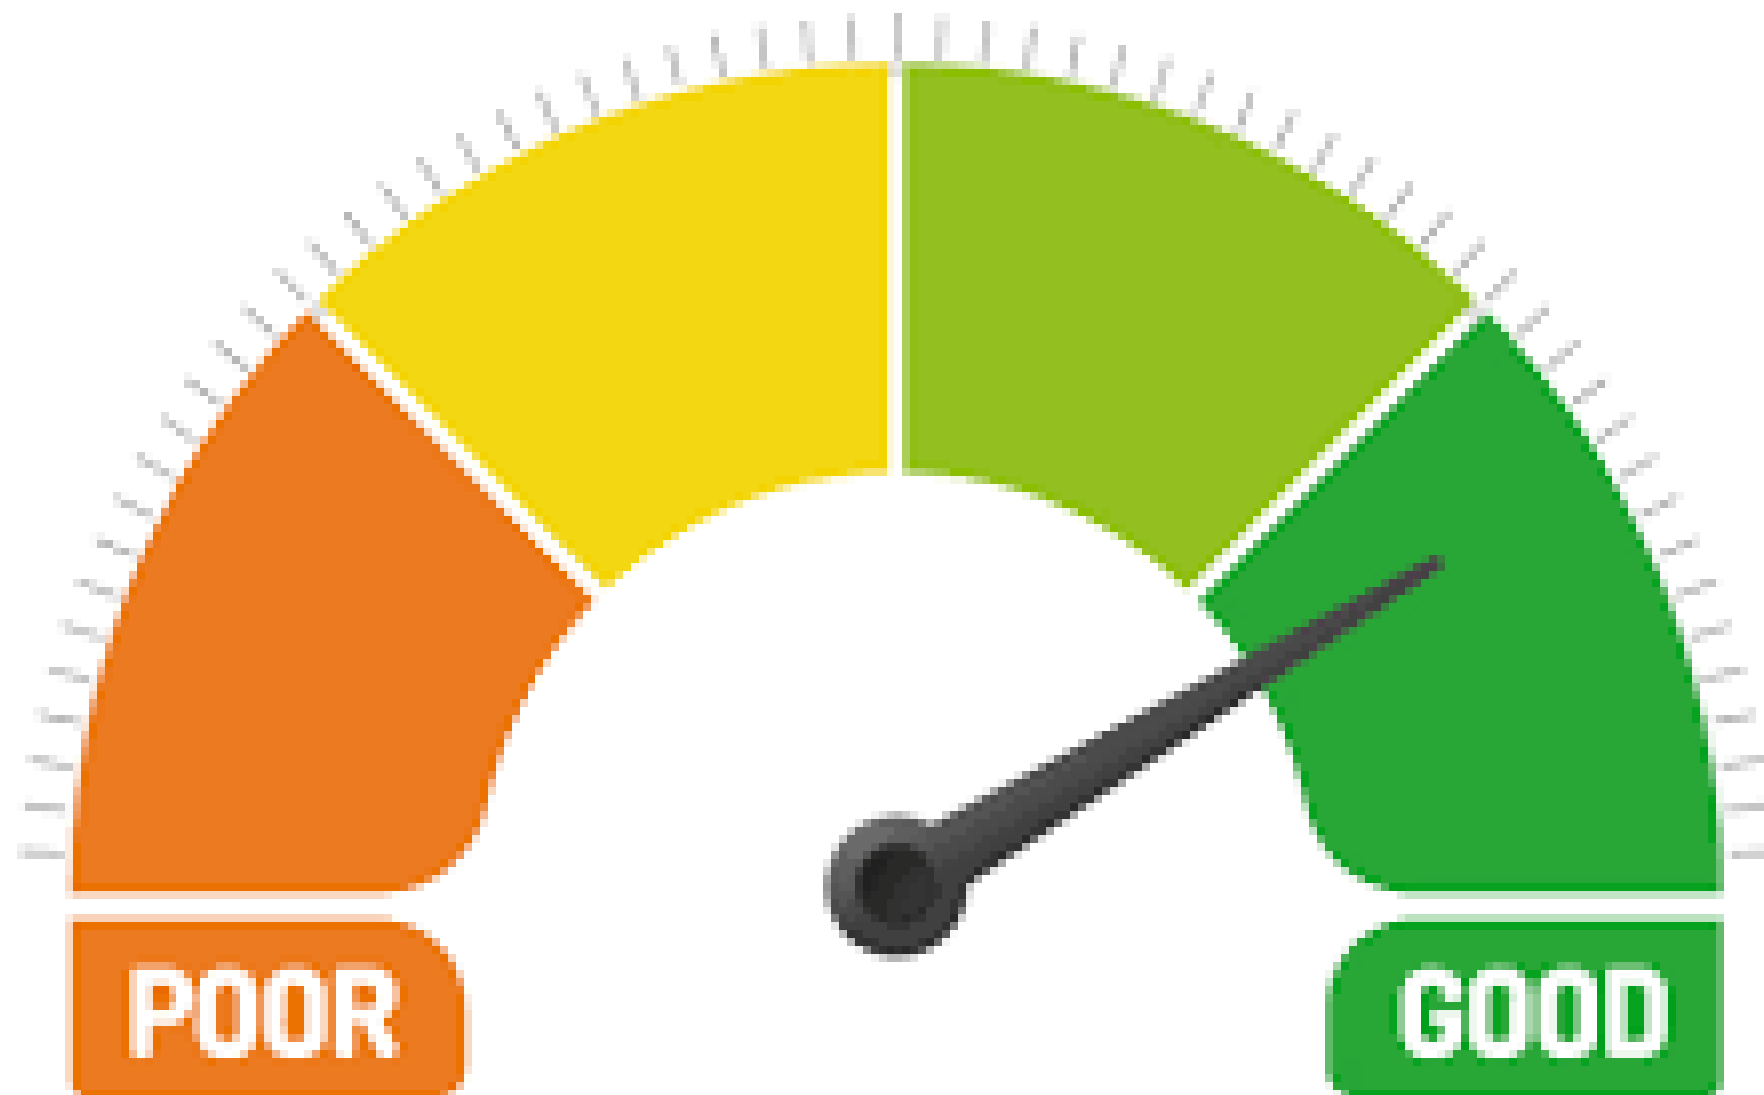

Create digital NFT's for your limited edition goods. Also provide enhanced experience for your Store Reward programs using Web 3.0

METaverse

Each product in the store has a digital twin on the blockchain. Add a Web 3.0 experience to the customer by having a virtual store in the metaverse.

Efficiency

RESOURCE OPTIMIZATION

Self-Checkout frees up checkout employees who would have been otherwise engaged in the checkout processing.

REALTIME INVENTORY

Automated real-time inventory will provide better inventory planning and optimization.

STOCK AUDITS

Instant stock audits using the technology using a handheld RFID reader.
