## Google Places Region Stack Integration Instructions

Happ Travel Inc.

## Configuration

- 1. Provision the offer through Azure Marketplace web portal
- 2. Invoke configuration end-point (one-time)

GET to '/api/config/region-stacker' with params:

**googlePlacesApiKey**: Your Google Places API key. This will be used to look up regions/territories which the given place is contained in.

## Service Usage

**Your Back-end** 

1. Provision the offer through the web portal

2. Initialize configuration

(INPUTS: Google Places API Key, webhook URL)

3. Request a region stack

INPUT: place ID

placeID: Specified as 'GP::{ID}'
where ID is the Google Places of a
place (usually a POI, building etc.)

**Our Service** 

POST /api/config/region-stack

**GET /api/places/region-stack**
