

Safeguard the data you need to compete

Our ML and AI-powered backup platform safeguards critical cloud data with seamless pricing, hassle-free hardware management, and unmatched security. With predictive analytics, we proactively prepare for disasters, enabling swift data restoration, ensuring you're always recovery ready.

Some of our partners

In the fast-paced and data-driven digital landscape of 2023, ever-evolving threat landscape presents substantial risks to the security and availability of SaaS solutions.

Cyberattacks, ransomware incidents, accidental deletions, and system failures pose significant challenges to businesses. SaaS platforms are not immune to these threats, and data loss or corruption can have severe consequences, including operational disruptions, financial losses, reputational damage, and legal implications.

The image shows two overlapping screenshots of cybersecurity news websites. The top screenshot is from TechTarget's 'Data Backup' section, featuring an article titled 'New SaaS hacks highlight need for backup data protection'. The article text states: 'Enterprise IT and vendors alike need to prioritize strong backup data protection policies and procedures in the wake of numerous high-profile SaaS hacks and ransomware shakedowns.' The bottom screenshot is from 'The Hacker News', showing an article titled 'SaaS in the Real World: Who's Responsible to Secure this Data?' dated Feb 06, 2023. Below the title is a table with columns for 'SaaS Activity', 'App Owner', 'Central IT', 'Security Team', and 'GRC Team'. The 'SaaS Activity' column contains the text 'Setting up security policy (password, ...)' and the 'App Owner' column contains the text 'Consulted'.

Solution - Our product

To do this, we envisioned an all-in-one backup and recovery solution that is powerful, simple and secure.

Manage all your applications from a single interface that needs no training and hardly any effort to manage.

We have the best technology, but don't take our word for it.

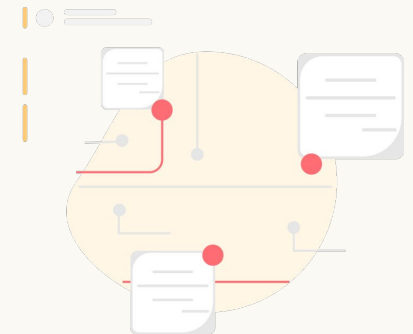

Key features

Recoverable set out to solve one problem very well: to eliminate SaaS system data loss for our clients, thereby protecting their continuity, future and bottom line.

- ✓ **Radically simple:** Zero complexity setup to manage all your applications, services, security, and reporting from a single console with backup automation, disaster recovery, security and compliance.
- ✓ **Cyber secure:** With zero-trust architecture and 24/7 centralised security reporting protect all your data easily with access control, built-in air-gap, immutability, and encryption.
- ✓ **Industry-agnostic:** Military grade backup available to all industry domains including healthcare, banking, insurance, legal and government.
- ✓ **Infinitely scalable:** Automatic and on-demand resource scaling with unlimited storage ready so your backups won't fail.
- ✓ **SaaS efficiency:** Automatic updates to stay secure and protected without maintenance.
- ✓ **Resiliency guaranteed:** Total protection and zero compromises with coverage for 5 key data risks and sata health check to ensure data is safe.

Partner with us

Give your clients 100% confidence in recoverability with enterprise-grade solutions that are custom-built to meet the strictest backup and recovery SLAs.

- ✓ Backup customer data from many SaaS sources with no storage limitations
- ✓ Reduce overheads by managing all your monthly subscriptions through a single consolidated dashboard
- ✓ Generate revenue from day one – set up in minutes with just a few clicks
- ✓ Simple subscription pricing and product support your customers can truly rely on
- ✓ Enjoy robust co-marketing and exclusive partner discounts, commissions and rewards

The image shows two overlapping screenshots of the Recoverable Partner portal. The top screenshot is the 'Dashboard' page, which includes a 'Storage growth' chart showing an increase of +12% in total data over the last 90 days (from 20.2 TB to 35.35 TB). It also features an 'Account status' section with a table of account types: 05 Trial, 01 Annual, 03 Monthly, and 02 Inactive. Other sections include 'Billing status' (Total paid: £134,500), 'Services' (Operational services), and 'Platform Update' (Sharepoint updated 10 April 2022). The bottom screenshot is the 'Billing' page, showing a table of accounts with columns for Account Name, Billing Status, Subscription, and Amount. It lists accounts for 'Zlich' (£585.00) and 'Serco-IT' (£200.00). A summary box indicates 'All bills on track' with previous payments paid and a forecast for the next annual payment due on Oct 22nd 2022. Below this is a table of services including MS Exchange (36 mailboxes, £585.00) and MS Sharepoint (495.28GB, £0.00).

“Recoverable Cloud Backup SaaS is a game-changer! Their reliable and secure solution has saved me from potential data disasters and provided peace of mind for my business. Highly recommended!”
