

Zero Trust: Defend Against Threats

Accelerate the deployment of the Microsoft Zero Trust Foundation solutions for your M365 tenant to ensure secure access to your cloud investments.

Azure AD and Conditional Access is at the heart of the Microsoft Zero Trust User Access model. When enhanced by Intune (Device/App Compliance policies), you can apply the right access controls when needed to keep your organization secure and stay out of your user's way when not needed.

The pillars of Microsoft Zero Trust (Defend against Threats) are:

Threat Protection

Verify explicitly

Use least-privilege access

Assume breach

KiZAN will assist your organization with deployment of the Microsoft Zero Trust Foundation for your M365 tenant. This solution will help ensure you have the appropriate controls in place to ensure your users and device are protected when accessing the M365 cloud.

Deliverables:

- ▶ Complete Zero Trust Defend Against Threat planning session
- ▶ Verify Zero Trust Defend Against Threat pre-requisite configurations are in-place
 - Azure AD Connect with Seamless SSO and Hybrid Azure AD Join
 - Azure App Proxy
 - MFA and SSPR with AD password Protection
