mint Create tomorrow

SMART Integration

Automate seamless integration between on-prem environments and cloud-based solutions.

Why Choose SMART Integration?

Connect on-premises and cloud-based applications and services to implement highly secure messaging workflows between applications and the master data management within your organization. SMART Integration enables transactional **message brokering** that ensures transactional integrity for all internal message operations between applications, systems and data.

What Do You Get From SMART Integration?

Automate integration between on-prem environments and cloud-based solutions
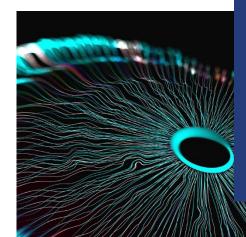

Manage real-time messaging between environments

Automate logic for integration between systems

Technology Used

- Vision AI
- Power BI
- Azure Service Bus
- Azure App Services

- Azure API Management
- Azure Storage
- Azure SQL Database
- Azure Key Vault

- Enterprise Service Bus
- Azure Role-Based Authentication & Security

Benefits:

- Connect existing on-premise systems to cloud solutions
- Distribute messages to multiple independent back-end systems
- Scale out ordered messaging to multiple readers
- Enable existing Java Message Service (JMS) applications to talk to Service Bus
- Build reliable and elastic cloud apps with messaging
- Protect your application from temporary spikes in traffic
- Decouple your applications from each other

What Do You Need For SMART Integration?

These are the minimum requirements to be eligible for the SMART Integration solution:
- Active Azure tenant
- Power BI Licensing

Simple message broker technology to enable integration and workflows between on-prem and cloud-based systems
