WME
Windows Management Experts Inc.

Windows Management Experts is a leading rapid and responsive Microsoft solution integrator that helps direct customers and partners realize the full benefits of their existing Microsoft investments through a number of solutions in the areas of M&A migration services, Power Platform, Endpoint Management, Microsoft Security & Compliance and Azure services. In our practice we found that roughly 30% of our clients use only 40% of the overall features with the licenses they are already paying for. The value we provide is in closing that gap so the full realization of the Microsoft technology stack is captured, adopted and benefited throughout the organization.

Windows Management Experts
Microsoft Security Assessment

WME Helps You Maintain Your Security-Related Certifications

- Though Azure and Microsoft 365 already offer comprehensive compliance offerings that can help organizations meet their regulatory requirements, WME security assessment offerings provide a much-needed boost to your compliance-related risk handling, improvement to cybersecurity posture, and sensitive data protection.

- Plus, organizations need some strong professional backing to be sure of their vital assets' ultimate safety and earn/maintain their widely acclaimed security standards. At WME, we are proud of our "Secret Sauce" Security Assessments based on the latest security best practices and some WME-exclusive techniques.

- We also use customized & propriety tools to help organizations with their own security perspective and automate their systems to have their entire infrastructure reach a level of compliance so that they can adhere to any crucial security-related certifications.

- We also use some native tools provided by the hyper scalers and have a unique AD Automation blueprint that we create for your security auditors so that they can run future security assessments on their own.

- We also assist your organization get/maintain 120+ plus compliance certifications for Microsoft Azure and Microsoft Office 365. Moreover, we provide you with ongoing support to help your team comply with these standards. We deliver all these services by conducting regular audits, building comprehensive dashboards with user-oriented metrics, and training your employees on security best practices.

Some Examples of Compliance Certifications:

SOC 2 Compliance: We provide a detailed assessment of your Azure and Microsoft 365 environments to identify potential SOC 2 **(Systems and Organization Controls 2)** compliance gaps. We then work with your team to implement the necessary controls to close these gaps.

NIST Compliance: We help you implement the NIST **(National Institute of Standards and Technology)** Cybersecurity Framework to improve your organization's overall cybersecurity posture. This would include implementing encryption, access control, and incident response controls.

CSA ISO compliance: We help organizations obtain CSA **(Safety standards in Canada)** STAR certification; an independent assessment of their cloud security controls. This would demonstrate to their customers and partners that they have taken the necessary steps to protect their data.

And 100+ more

Windows Management Experts
Microsoft Security Assessment

What We Provide

1. Identify any malicious users or activities in the environment.
2. Perform a thorough review of all configurations within M365 and Azure.
3. Assess risk factors related to user access controls, application vulnerabilities, and system security settings.
4. Ensure proper data governance policies are in place.
5. Provide recommended best practices and other areas to be reviewed to secure your services.
6. The time frame for completion is one week with reporting to the delivery team approximately five days.

What We Do

1. **Collect data** - Define data collection process.
   a. Consultant direct access to environment and will install and run scripts to collect data.
   b. Consultant executing the tasks with customer "over the shoulder" monitor.
   c. Customer executes the steps with technical consultant oversight.
2. **Collate data** - Technical consultant will parse, consolidate, and organize data for analysis by the tools.
3. **Create report** – a multiple excel spreadsheet will be create provide a comprehensive view of all the components in the environments along with noted risks in a high, medium, and low ranking. Report includes recommendations on what needs to be done to accomplish various certifications (Zero Trust, HIPAA, SOC2, etc.)
4. **Review report and finding** – this includes 1-2 hours review of the findings and a discussion of potential next steps or action the customer may want to take based on the review.
5. **Remediate** any agreed upon and discovered critical or high-risk intrusions or settings/configurations that were discovered and reported in the scan/findings.

What You Get

1. A multi-tab Excel workbook with results of scans and list of security risk and comprehensive recommendations
2. A one-to-two-hour review of the Findings Report

What it Costs

1. Single Security Scan and Findings Report costs $5000.
