Use case

Offices: smart cleaning

The COVID-19 pandemic has made us all much more aware of the importance of hygiene and cleanliness.
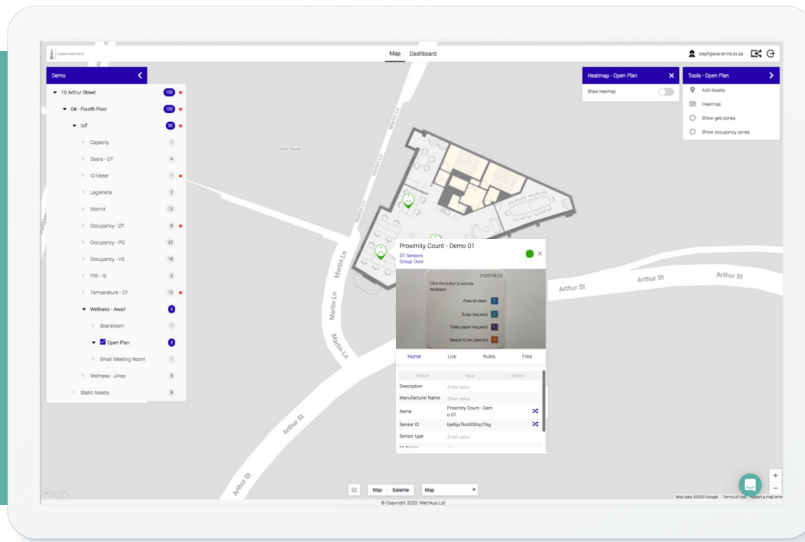

Keeping an office clean is no longer just about vacuuming the carpets and clearing away used mugs at the end of the day. It's about cleaning proactively to reduce the risk of virus transmission and keep employees safe.
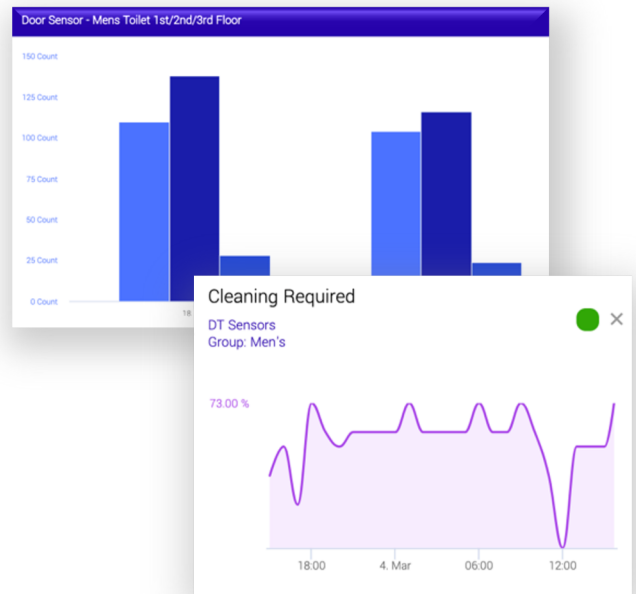

The challenges

- Cleaning tends to be scheduled whether the space has been used or not

- Spaces are often left unclean until the next cleaning cycle

- Manual schedules are not always filled in accurately, if at all

- Employees are increasingly concerned about office cleanliness

Our solution

- Track cleaning frequencies and receive alerts when an area needs cleaning

- Identify areas that are used most frequently and at what specific times

- Create your very own smart cleaning regime

- Show employees that you're creating a clean and safe working environment
