We connect the dots between ESG Promises and Achievement

ENVIROMENTAL

SOCIAL

GOVERNANCE

Does my organisation have a defined data management and governance policy to support ESG reporting requirements?

Unlocking the potential of ESG requires comprehensive data on environmental, social, and governance factors. However, this data is often scattered across multiple systems, hindering effective reporting and decision-making. That's where our ESG Data Maturity Assessment comes in.

Investors, too, rely on data to evaluate your ESG performance. They seek information on energy use, carbon emissions, water usage, waste management, labour practices, human rights, diversity, and more. Without comprehensive data, assessing your ESG performance and aligning it with their investment goals becomes challenging.

Assessing your current data availability, usability and reportability is the first step in the journey towards a robust ESG data strategy. Why? You need to understand the present to allow you shape your future ESG strategy.

That is where TEKenable's ESG Data Maturity Assessment comes in. Our team of data and sustainability experts will assess your current ESG data management and governance, identify gaps, and develop a digital roadmap to enable you to collect, measure, & report the essential data that drives sustainable business practices.

Who should take part?

Teams who wish to understand their current data management and governance performance as well as the specific roadblocks which will inhibit their ability to accurately report on and achieve ESG goals. Your organisation needs to capture all relevant data sources and provide your organisation with the ability to externally report credible, reliable, timely and verifiable ESG data.

Deliverables

01 A comprehensive report including data maturity ratings per ESG pillar and all relevant subcategories (energy usage, wages, etc).

02 Recommendations to utilise digital technology to redesign and improve your ESG data management and governance.

03 Detailed action plan to include prioritisation, supporting your organisation's move to enhanced data management, and enabling improved decision-making.

04 Presentation by TEKenable of the Data Maturity Assessment findings.

Why TEKenable?

We combine over 20 years of experience as a Microsoft managed partner with Data and AI solution designation and ISO 9001 & ISO 27 certification ensuring our security credibility.

With TEKenable's ESG Data Maturity tools your current data maturity, identify gaps and Health Check with:

| Dedicated sustainability consultant | Relevant tooling | Data expertise |
