

# Finding the right balance of data security and personal privacy with BYOD 365

*“Auckland Transport partnered with Mobile Mentor to help it modernise and upgrade its large fleet of mobile devices. The core focus of the program was to mitigate risks by outlining the permitted use and required behaviours expected from employees.”*

Raymond Maharaj  
Risk, Security & Compliance Manager

## **Securing corporate and personal devices**

Auckland Transport operates a high-trust workplace with people working in multiple locations, using different devices and applications, with a mix of corporate and bring-your-own devices.

## **A collaborative approach to policy design**

Mobile Mentor was engaged to assist with the development of a mobile policy. Working with key stakeholders, Mobile Mentor interviewed staff across the business functions and produced a mobile policy to suit Auckland Transport's requirements, including the use of BYOD.

## **A balance of information security and personal privacy**

The resulting policy protected Auckland Transport's information security, whilst also aligning with the business culture of empowerment and respect for the individual's privacy.

## **About Auckland Transport**

Auckland Transport's day-to-day activities keep Auckland's transport systems moving; including planning and funding of public transport, promoting alternative ways to get around and operating the local roading network.

*“Mobile Mentor defined the technical controls to enforce the policy and detect violations. They worked well with Auckland Transport in the change management role that was required to successfully deliver the project”*
