

FAN Courier Integration

for Microsoft Dynamics 365 Business Central

Overview

FAN Courier Integration allows companies to seamlessly send a goods delivery request within Dynamics 365 Business Central. The integration is established via an API (Application Programming Interface) provided by FAN Courier. The application establishes a connection with the API.

When an order is published in Dynamics 365 Business Central and the goods are packaged, delivery services can be requested. To populate the label shipping information, such as delivery details, product type, service level, quantity, and other information, is taken from the order. The label is generated in PDF format and can be printed from any printing device. All the information to request the delivery of the parcel is received by FAN Courier to be dispatched to the selected destination.

It is a perfect tool for:

- Companies that place orders worldwide and use FAN Courier services
- Creating labels for international mail, lightweight items and merchandise

The application is integrated with Dynamics 365 Business Central.

FAN Couriers Integration is available on Microsoft AppSource.

Features

General:

- FAN Courier Profile to specify all particular default parameters
- Setup list for both test and live environments and activation
- Authentication with the Web Service with client ID and secret
