Microsoft Syntex

Microsoft Syntex is a Microsoft 365 service that uses advanced content artificial intelligence (AI) and machine learning to provide an end-to-end intelligent document processing solution for your organization.

The key to this technology is the INNOVATIVE AI features that transform how content is CREATED, PROCESSED, and DISCOVERED

MICROSOFT SYNTEX ADVANTAGES

Using this accelerator as reference architecture has immediate benefits

ENHANCE: Understand and Assemble

Understand and assemble content with AI powered processing, summarization, translation, auto-assembly, and annotations integrated in Microsoft 365

CONNECT: Discover and Reuse

Discover and reuse content AI powered search, e-signature, and integration into business workflows

MANAGE: Analyze and Protect

Manage, backup, and restore your content while managing storage costs and complying with long-time archive needs

SLALOM'S APPROACH

We take a people-first approach and tailor our solutions to fit what people really need to be more productive.

DISCOVERY:

Determine the types of content the organization uses and how they would want to search and refine that content in the future

ALTERNATIVELY, OR IN CONJUNCTION:

Look at how the organization could create the content in a consistent pattern to enable a searchable and refinable content repository over the long term for future content

PROOF OF CONCEPT:

Show the power and viability of the solution, which then leads to a full-scale rollout across a business unit or the organization, while always providing organizational change management along the way to ensure the initiative's success

Schedule a Microsoft Syntex Workshop with us!

Agenda:

- Welcome & Workshop Overview
- Use Case Review
- Who is the Audience?
- Brainstorm & Discuss Requirements
- Prioritize Requirements
- Discuss Next Steps – Proof of Concept
