Build a connected ecosystem with IoT in a Box

Revolutionizing experiences with technology for 200+ clients in 12 nations, we put people at the center, craft human-first technology solutions, and bring visionary ideas to life to help you transform everyday living with HARMAN Life-ware.

Clear the Clutter of Protocols, Standards, and APIs

With HARMAN Life-ware, we're asking what technology can do to combine the physical and digital worlds. And this is more so when integration-related challenges are becoming overwhelming across industries. HARMAN introduces an IoT platform that is simple and easy to use without the dependency on experts. It helps by giving you built-in tools and capabilities to ease your IoT journey. Ensure efficiency, reduce risks, and boost ROI by jumping over hurdles to get the desired business output.
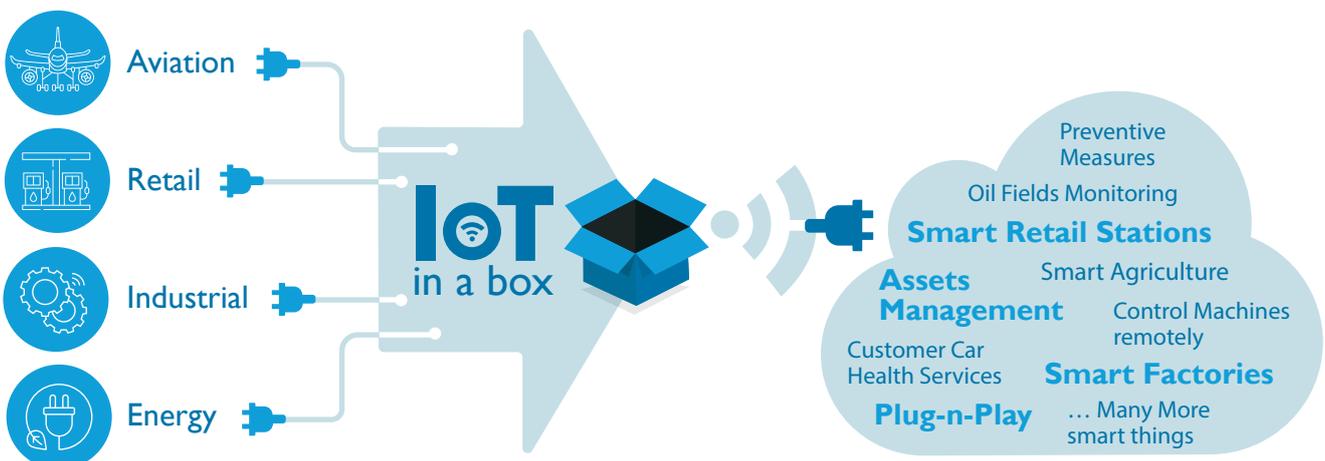

Capitalize on IoT maximally with IoT in a Box by HARMAN

A gateway hardware and IoT cloud-agnostic platform by HARMAN, IoT in a Box is a subscription-based, do-it-yourself tool designed to integrate shop floor activities with boardroom ones, creating a unified view of all business layers.

All you need to do is unbox, plug in, and draw your IoT landscape!

Streamline and synchronize connected devices for better configuration, management, and administration.

- Retail
- Industrial
- Energy

IoT in a box

Preventive Measures
Oil Fields Monitoring
Smart Retail Stations
Assets Management
Smart Agriculture
Control Machines remotely
Customer Car Health Services
Smart Factories
Plug-n-Play
… Many More smart things

Enable a Connected Network That Works Like a Living Organism

IoT in a Box by HARMAN offers a jump-off point by combining tools that handle everything from deployment and device management to data prediction and insights. It facilitates communication, data flow, and the functionalities of different applications. Acting like the basic foundation of a house, it allows for simple and easy construction of your solution with customized use cases and isolated testing environments.

Wizard-based, packaged solution	Zero technical knowledge required	Use case onboarding in minutes
Flexible pricing models	Browser-based UI	Supports all protocols

Let IoT Simplify Your Operations

For a Smart Fuel Station, HARMAN IoT in a Box can manage OT assets as per your business needs. It can enable smart asset management for predictive maintenance, centralized command centers, proactive ticket generation, and safety and utilities management. You can simply unbox it, configure and connect it, and start the Smart Fuel Station.
