

Kick-Starting Power Apps Project Delivery in 3 Weeks

An Assessment Workshop: Explore, identify, measure and foresee the future solution

Why:

EPAM suggests conducting an assessment phase to establish a clear direction, accurately identify the roadmap and deliverables, and select the appropriate skillset.

What:

The assessment will identify the following areas of uncertainty:

- Planning
- Technology stack
- Business dependencies
- Model for cooperation
- Alignment of business applications with foundational services
- The maturity and productivity of processes
- Division of responsibilities between client and vendor(s)

During our assessment phase, we will work on defining the target timelines, refining the solution architecture, and creating an implementation plan. We will prioritize requirements to meet Client goals, collaborate on processes and governance, and work with the customer to deliver the solution effectively. We will also determine the project's size for implementation.

3 WEEK POWER APPS ASSESSMENT WORKSHOP ENGAGEMENT FRAMEWORK

Kickoff

Reviewing documents, mapping content, identifying missing information, confirming scope, stakeholders and operating model, defining governance structure, setting up communication plan, identifying tools and requirements, setting up project team and standards, and validating data sources and systems

Assessment and Deliverables Preparation

The tasks involve designing the solution, refining build estimates and team structure, preparing a high-level product backlog, and creating functional stories for the first two development sprints

Deliverables Demo

Showcase the features and functionalities of the assessment results

Deliverables Refinement

Reviewing and improving the quality, accuracy, and completeness of assessment

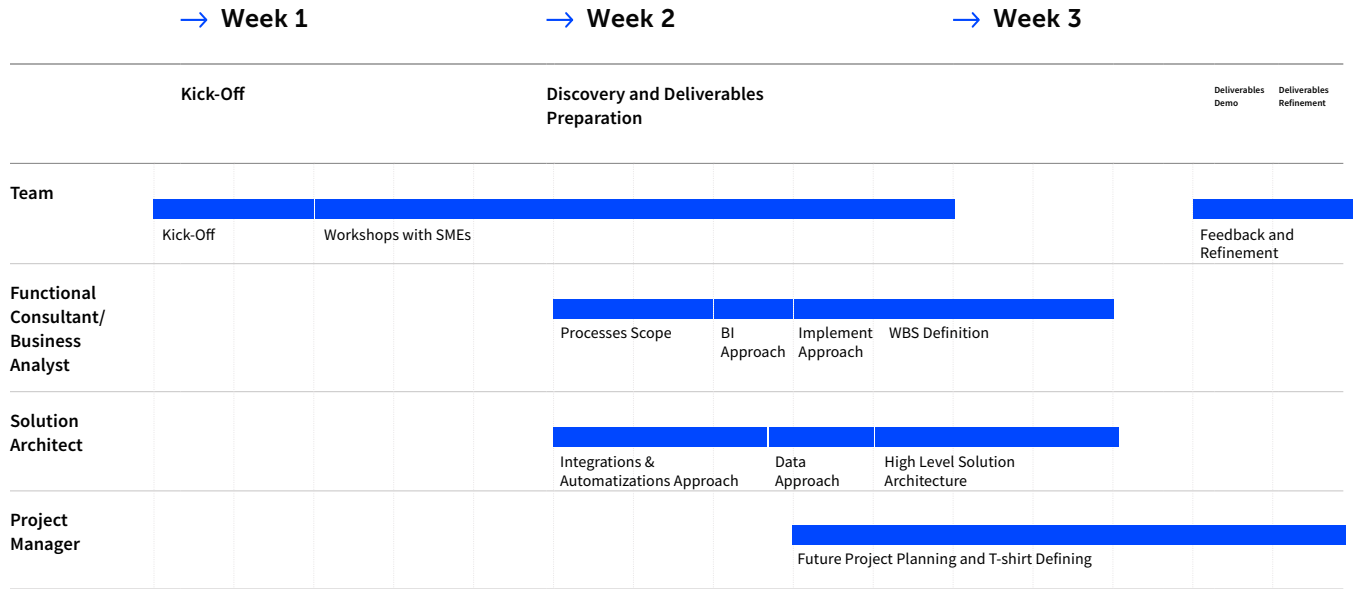

Assessment Results

- Project governance
- Application strategy
- Intelligence strategy
- Business process strategy
- Data strategy
- Integration strategy
- Security strategy
- Release management strategy

ESTIMATED COST:
\$23,000
