

Citizen Developer Program

Business challenge

The Power Platform® gives you great low-code tools that can be used by your employees to build their own apps. These apps can increase individual productivity or be leveraged by one or more teams. The challenge is ensuring that your maker community is aware of the tools' capabilities, and that this community has the right support, embraces recommended best practices and adheres to your organization's security standards.

How we help

Insight's Citizen Developer Program gives you the building blocks to put the right program in place to enable and support your maker community. Over the course of the engagement, our team of experts will:

- **Prepare** your organization for citizen development by ensuring your platform is ready, setting up a Community Hub and helping with support planning.
- **Inspire** your community by hosting Art of the Possible Workshops, App in a Day (AIAD) Workshops and hackathons.
- **Discover** all the opportunities for automation by working with the community and cataloging the use cases.
- **Empower** your citizen developers by providing architectural and developer expertise to help makers build their own or accelerate the development of new apps.

By the end of this engagement with Insight, your organization will be fully prepared to enable your citizen developer community and feel confident that you have done it in a secure and manageable way.

Prerequisites

To maximize the success of this initiative, you should have:

- Active Azure® subscription
- Existing Power Platform deployment
- Availability of Power Platform stakeholders
- Appropriate licenses

Duration

6 weeks

Benefits

- + **Host hackathons** to empower your employees to build their own apps.
- + **Educate employees** on how to best use Power Platform.
- + **Create a culture of innovation** where individuals can effectively drive business outcomes.
- + **Engage** your maker community.
