

FINALLY THE WAIT IS OVER

With IDABUS, there is a cloud successor to Microsoft Identity Manager (MIM). Identity management enables the individual adaptation of different company requirements. With IDABUS, it is possible to manage your company's users and data, synchronise them with other systems and map various company processes. IDABUS implements a central access control system by automatically controlling the users' access to required data and applications.

FEATURES & COMPONENTS

Performance

The performance of the IDABUS software (frontend and backend) is dynamically scalable to better compensate for workload peaks.

Security

Securing via further Azure Services possible (Microsoft Defender and API Management).

Support

A 24/7 HelpDesk in English and German is available for the IDABUS software.

Self-service user interface

The customisable user interface allows users to have an individual view of the corporate structure. It is also possible to request authorisations and group memberships as a self-service.

Authentication

Single Sign On for Azure AD and other Kerberos-based systems.

Migration

Providing a free migration tool to ensure a semi-automated migration of your MIM 2016 environment.

Object history

All data is backed up in accordance with compliance guidelines and can be output in attractive reports.

RBAC

The IDABUS-RBAC extension enables sophisticated access and authorisation control and can be provisioned in various connected systems.

Efficiency improvement

Workflows for onboarding/offboarding scenarios and other business processes reduce manual intervention to manage users.

→ Visual support

Workflow simulation

In order to test the business logic in advance or to analyse the effects of individual workflows, it is possible to execute the functionality in preview mode. This allows the potential effects to be viewed in advance.

Process resumption

If a workflow request fails or is stopped, the process can be resumed at a specific point to apply the remaining business logic.

Component extension

If complex role management is required, the IDABUS system can be extended accordingly to connect the access governance software of our partner NEXIS.
