ECF DATA AZURE VMWARE SOLUTION

Effortlessly transfer or expand your VMware environments from on-premises to Microsoft Azure, maximizing productivity and leveraging your investments effectively.

Microsoft's Azure VMware Service (AVS) expedites your organization's migration to the cloud and maximizes the value of your investments in Azure and VMware. ECF Data's Azure VM Solution offering provides a comprehensive and modularized solution that helps organizations seamlessly migrate their VMware-based workloads into a robust and well-planned enterprise environment.

What is Azure VMWare Solution?

- It encompasses a complete VMware environment hosted on dedicated Azure infrastructure.
- Developed jointly by Microsoft and VMware.
- Microsoft provides native support and operations for running your VMware workloads on Azure.
- With a consistent operating framework, you can efficiently manage and secure applications across both VMware environments and Microsoft Azure.
- It enables you to expedite your migration to the cloud and drive your digital transformation initiatives at a faster pace.

The alignment of AVS to your business needs:

High availability, cloud bursting, and disaster recovery

IT expansion, datacenter reduction, or retirement

Desktop virtualization in the cloud

Application modernization, development, and testing

Speed and simplification of migration/hybrid cloud

A trusted partner of Microsoft for AVS:
