Using OpenAI to Automate Workflows

- **Problem**
  - Many companies have a list of requirements for their stakeholders, business leaders, customers, and more. However, without proper tools, this process can seem outdated, slow, and prone to error.

- **Solution**
  - This client built their requirements solution on Microsoft Azure DevOps with an integration of Azure OpenAI.
  - This model needs little to no training and can handle multiple tasks and generate human-like content.

- **Benefits**
  - Clients are now able to benefit from these modern requirements.
  - Business can happen faster, safer, and more seamlessly.
