Bunifu Technologies

Bunifu Framework (UI Developer tools)

Modern user interface(UI) tools for Visual Studio .NET software development

Bunifu TECHNOLOGIES

Challenges

- Delivering great software user experiences is time consuming due to complexity and lack of flexibility with the current UI tools.

- This impacts negatively on software developer productivity hence driving project costs higher due to delays in project completion

- Existing tools require a lot of customization to achieve great UI
- More time and resources are spent to create great looking user interfaces
- Current tools lack flexibility due to its limited properties

Ideal Solution

Developers are looking for high performance, easy to use, modern looking UI developer tools.

They are looking to create good looking software while remaining efficient saving cost and time.

- Bunifu developer tools provide a faster way to get UI designs faster
- Bunifu developer tools is lightweight hence guarantees system and software performance
- Bunifu tools provide great style and flexibility hence modern interactive software interfaces

Desired Outcomes

Developers buy Bunifu Framework because it is light weight on the system hence guaranteeing performance and modern user interface design.

1,500 happy developers and business have increased their productivity, save time and costs while delivering great user interface experiences.

- With Bunifu developer tools expect improved productivity within software development life cycle – faster shipping
- With Bunifu developer tools users / customer will enjoy great software user experience
- We provide quick support for our customers

Bunifu Technologies – Bunifu Framework

Empowering .NET developers craft stunning modern desktop application user interfaces fast

Faster development

Bunifu developer tools guarantee improved productivity for your team

- Reduce development time by 50%
- Spend less time on UI design and spent more time on logic

Improved productivity

Shorten your software development lifecycle

- 2x your productivity by using built in drag and drop features

Modern designs

Create stunning looking modern user interfaces

- Built-in modern features gives developer power to design
- Create trendy user interface designs using built in design concepts such as flat design, metro design and material design
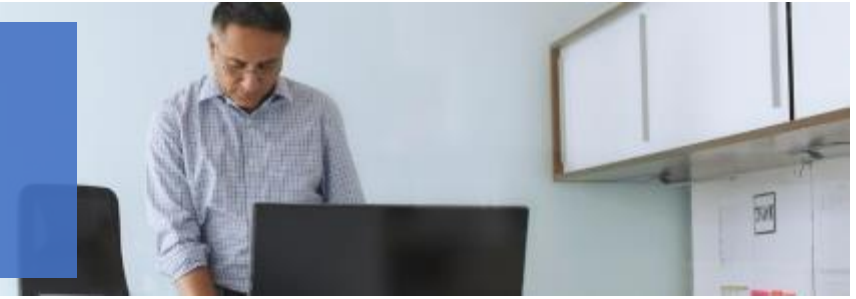

Friendly licensing

Developer friendly licensing options

- No need to purchase additional deployment licenses
- Offline licensing is available
- Affordable licensing compared to existing solutions

"We were looking for a light weight, modern looking UI framework. A google search led us to the Bunifu UI. After watching their online video tutorials, we gave them a try and were impressed by the results" **- Ralph Akhras CEO, Soraco Technologies**

Bunifu Technologies – Bunifu Framework – Microsoft Visual Studio .NET user interface developer tools

Using Microsoft Visual Studio .NET platform and Bunifu Developer tools, save software development time while creating stunning user interfaces for your apps. Achieve this using built-in drag and drop modern features hence 2x your productivity and deliver projects in time.

Solution Alignment

Team productivity	Style and flexibility	Efficient & fast support
- Faster UI development using Visual Studio - Faster prototyping and design conceptualization - Reduced UI development time hence more time on logic	- Increased flexibility to achieve any design trend - Empowered ability to craft modern good looking software interfaces	- Quick response time through ticketing, email and chat support - Extended support through live remote assistance
