

## Enabling & automating high fidelity care coordination

High fidelity care coordination connects case managers, clinicians, family, team members, and external care providers to deliver better outcomes for youth and their families.

Automating care coordination methodologies like Wraparound, FidelityEHR enables high fidelity care coordination through data-driven decision-making, improving behavioral health outcomes and helping case managers effectively manage risk and compliance.

Using our customizable workflow features, we build a client record workflow tracker that automates your practice model, enabling users to better adhere to your model and to track and report meaningful outcomes.

FidelityEHR was specifically designed to support different evidence-based practice models including:

- Systems of Care Wraparound,
- Integrated Behavioral Healthcare, and
- Person-Centered Planning.

### Individualized Plan of Care

- Coordinated mix of services, customized to the behavioral needs of client
- Culturally and linguistically informed plan
- Easily accessible to client, family and care providers via portal

**Customized, needs-based plan**

### Team-based Care Coordination

- Improved care outcomes and overall health
- Greater satisfaction and natural support for the youth, family and providers
- Reduced costs associated with care fragmentation and over-utilization of care

**Optimized care team communication**

FidelityEHR adheres to System of Care (SOC) principles to drive better mental and behavioral health outcomes

- Evidence-based practices continually improving care coordination model
- Leverages strengths-based assessment to promote self-efficacy
- Enhances the success of grant funding
- Youth and families experience better outcomes

### Informed through Evidence-Based Practices

- Outcome-based with real-time data analytics
- Graphically monitored outcomes via client dashboard
- Youth feedback leveraged to influence community, state and national policies

**Committed to long term improvements in behavioral care**

### TRINA CORNELISON

**Former Executive Director, South Carolina Continuum of Care SOC**

*FidelityEHR has been a critical tool for our agency in increasing fidelity to the Wraparound practice model and in promoting positive outcomes for our children and families.*

# High fidelity care coordination built on Microsoft Azure delivers better outcomes at lower cost

FidelityEHR improves care coordination in populations with complex needs

- Defined care planning with step-by-step Plan of Care preparation
- Automated care management through workflow, ticklers, and reminders
- Management dashboard and provider clipboard provide implementation support & speed adoption

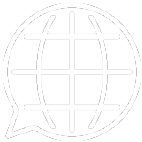

Pre-built, licensed Assessment Tools

- Child and Adolescent Needs and Strengths (CANS)
- Child and Adolescent Functional Assessment Scale (CAFAS)
- The Wraparound Fidelity Index, Short Version (WFI-EZ)
- Others can be configured

Infrastructure you trust

- Azure is recognized as the most trusted cloud platform
- Data driven intelligence through industry leading analytics
- Flexible platform enables innovation, easy updates and rapid deployment

## FidelityEHR

### Our promise to you

We'll help you institutionalize your high fidelity care coordination model and your assessment tools enabling you to deliver and measure better outcomes to youth and their families

Youth and their Families report better outcomes while providers report higher satisfaction

- Greater progress in meeting priority needs, improved youth functioning in home / school / community, and reduced out of home and community placement
- Increased efficiency of care coordination process, improved adherence to practice model, higher staff satisfaction as well as self-efficacy, and reduced costs to public systems

Drive better outcomes with data-driven electronic behavioral health records

FidelityEHR is a next-generation electronic health record that implements evidence-based principles of high fidelity care coordination and integrates research-based clinical care recommendations. Built upon a flexible repository of information on youth and families, it facilitates communication amongst team members, aids in the supervision and evaluation of staff performance, and delivers real-time monitoring of costs, services, and outcomes.
