Sustainability Accelerator - MSM Proof of Concept by Click2Cloud

Description

Microsoft Sustainability Manager is a cloud-based solution for managing and measuring sustainability initiatives. It includes features such as carbon, water, and waste accounting. With it, you can unify data intelligence and automate sustainability management at any stage of your organization's sustainability journey.

To deploy and configure Microsoft Sustainability Manager, it is essential to identify the reporting requirements. It is best to conduct a proof of concept to check the technology in real life and showcase the capabilities of the MSM.

Click2Cloud provides MSM PoC. The engagement includes a personalized MSM walkthrough, its features and benefits overview, customized reports and recommendations, and the implementation of calculation models based on requirements.

We help you define strategies and validate them; also provide a roadmap to help you scale out and achieve Net Zero goals. This PoC allows you track and report your Scope 1, 2, and 3 emissions, along with water usage and e-waste.

Why Click2Cloud?

- Microsoft Gold Partner
- Microsoft Industry Solutions Partner
- Leading Cloud-based Consulting Firm specializing in AI-ML, Advanced Analytics, and Data Engineering
- Global Presence
- 100+ Global Clients
- 500+ Highly qualified Data Scientists and Data Engineers

Value to Client

- Proof of standardized means to automate the measurement and management of emissions/water/waste.

- The ability to export data and configurations from the POC instance.

- An actionable roadmap to accelerate the journey to Net Zero.

- Visibility into the environmental footprint and ways to reduce it.

- Data-driven insights into reduction opportunities.

- Ability to provide an emission report.

Key Deliverables

- Configured MSM using client data
- Technical guides
- Custom reports
- Roadmap on next steps to scale out
