

365SecurityREADY

Upgrade Your Office 365 Security

www.tcf.cloud

The reality of businesses today

In this era of digital transformation, an organisation's most valuable asset is its data, yet many enterprises are struggling to ensure that their data stays secure, as the number and sophistication of online threats increases.

365SecurityREADY helps your organisation in understanding its current security posture, identifying and adopting the most appropriate Microsoft security tools that will better protect your business-critical data, guard against accidental sharing of sensitive information, enhance data protection in Cloud applications, and improve compliance.

How it works?

Upgrade security of your Office 365 to protect against threats and data loss by deploying **365SecurityREADY**, a 2 to 4 weeks once-off engagement, which is based on the following 3-step approach:

1 Security / Compliance* Workshop

Gain a better understanding of your security / compliance objectives aligned with your business needs

2 Scoping Workshop

Capture every information required for the deployment process, build a hierarchy of tasks to be executed & prioritize business impact

3 Deployment

Deployment of 365SecurityREADY, provide post-deployment support options, review & project closure

* The compliance workshop is applicable only for the Premium plan as an add-on

365SecurityREADY

Deployment Plans

	Standard	Advanced	Premium
	protect against common threats	baseline security for general organisations	enhanced protection for regulated industries
	\$ 3,500 (Once-off)	\$ 7,500 (Once-off)	\$ 9,500 (Once-off)
Threat Protection:			
Mobile Device Management (MDM) for corporate-owned PCs, laptops, and mobile devices	✓	✓	✓
Mobile Application Management (MAM) for protecting corporate data on personal devices	✓	✓	✓
Wipe corporate data from lost or stolen devices	✓	✓	✓
Advanced Threat Protection - protection against sophisticated threats hidden in email attachments and links	✓	✓	✓
Always up to date device protection using next-gen prevention technology towards viruses, malware and ransomware threats	✓	✓	✓
Conditional Access - maintain control over how company data is accessed (based on geo-location, device state or user group)	✓	✓	✓
Risk-based Conditional Access - ability to request for a password reset, enforce dual factor authentication or even block access, if users' sign-in session is marked as risky			✓
Attack Simulator - ability to run simulations of realistic attack scenarios in your organisation, which can help you identify vulnerabilities and take preventive actions			✓
Information Protection:			
Discovery, classification, labelling and protection of sensitive information		✓	✓
Protect local data at rest and in use on devices		✓	✓
Restrict copying or saving of corporate data to unauthorized apps & locations		✓	✓
Configure conditions for automatic and recommended classification			✓
Privileged access management – monitor, control and audit administrative tasks			✓
Workshop:			
365SecurityREADY – Security workshop	✓	✓	✓
365SecurityREADY - Compliance workshop			✓ (add-on)

The plans include consulting, planning, design & implementation services, and exclude any Microsoft licenses
