

SECURE, SCALABLE AND FULLY AUTOMATED SPIRIT/21 AZURE LAUNCH PLATFORM

KICK-START YOUR CLOUD JOURNEY

For medium-sized to enterprise organizations, who want to innovate and modernize their stack by moving to the cloud, the Azure Launch Platform offers a multi-subscription Azure environment, that accounts for security, governance, and automation best practices right from the start. If your goal is to migrate applications and infrastructure to Azure or to grow by leveraging cloud native services, the Azure Launch Platform guarantees that industry standards are met.

LANDING ZONE COMPONENTS

The central network hub for global connectivity lets you connect your on-premises datacenters as well as other cloud providers to Azure, while all traffic is inspected at the firewall. Preconfigured policies ensure that new resources get onboarded with the desired standard configuration and stay in budget. Monitoring and logging is managed centrally.

INFRASTRUCTURE-AS-CODE (IaC) & GIT

Increase the innovation speed of your teams by adopting DevOps workflows: the landing zone infrastructure is fully represented in code. Git version control tracks every change and allows rollbacks. The use of Terraform templates ensures that resources are delivered consistently and compliantly to minimize human error.

FAST IMPLEMENTATION

During the 1-week implementation, our team of experts gets your Azure environment ready to host all your applications. You will receive an introduction to the Cloud Adoption Framework (CAF) and an overview of all landing zone components. After completion, we will discuss enhancements, customizations and next steps to integrate initial workloads.

SPIRIT/21 AZURE LAUNCH PLATFORM

- Best practice approach for getting started in Azure
- For medium-sized to enterprise organizations
- Fast deployment with modular components
- Scalable, future-proof architecture
- Meets security & compliance standards from start
- Transparent pay-as-you-go-pricing
