

ChatGPT in the Enterprise

Implement a ChatGPT-like experience while protecting the privacy, confidentiality and security of your enterprise data.

We deploy secure ChatGPT experiences for your enterprise

ChatGPT came to revolutionize the world of Generative Artificial Intelligence. However, the standard OpenAI ChatGPT service is a consumer service, hosted in North American datacenters, and is not appropriate to be used with your enterprise data.

CHALLENGES

Securely integrate ChatGPT models with your enterprise data.

Implement ChatGPT services within the security boundaries of your network.

IDEAL SOLUTION

Integration of a ChatGPT model into your cloud network.

Integrate this network with the rest of your cloud and on-premises services.

Grant secure access to your enterprise data to the model for rich chat experiences.

DESIRED OUTCOMES

A smart chat experience that honors our data privacy requirements.

Chat experiences which your employees, customers and/or partners will love.

Protected access to your data for the model to produce responses.

Scope of the offer

Assessment

Analyze your Azure and on-prem environment to identify connectivity options.

Design

Propose integration architecture in your network.
Define which model is better suited for your use case.
Identify the channels to expose the chat to (web, MS Teams, agent, etc)

PoC

Proof of Concept deployed in a non-production environment to assert the technical feasibility of your use case.

Accelerate your innovation pace and enable transformative chat experiences in your enterprise
